

Significance:

- Its mechanism is via the renin-angiotensin-aldosterone system (RAAS)
- When the glomerular filtration rate dips, the juxtaglomerular apparatus stimulates causing the secretion of renin
- This renin converts a protein into a peptide, i.e., angiotensinogen to angiotensin
- Angiotensin is a hormone that elevates the GFR and the flow of blood in these three ways:
 1. Narrowing the efferent arterioles to cause an increase in the glomerular pressure
 2. Triggering the walls of the PCT in order to reabsorb more of water and NaCl
 3. Triggers the adrenal gland to secrete aldosterone that facilitates reabsorption of water and NaCl in the DCT.
- The volume of blood and blood pressure thereby increases. The hypertonic urine and urine volume decreases.

11. Name the following:

- (a) A chordate animal having flame cells as excretory structures
(b) Cortical portions projecting between the medullary pyramids in the human kidney
(c) A loop of capillary running parallel to the Henle's loop.

Solution:

- (a) A chordate animal having flame cells as excretory structures – Amphioxus
Flame cells or protonephridia are the excretory structures found in some animals.
- (b) Cortical portions projecting between the medullary pyramids in the human kidney – Columns of Bertini
The medulla is divided into several conical masses (medulla pyramids) that project into the calyces. The cortex extends in between the medullary pyramids as renal columns known as Columns of Bertini.
- (c) A loop of capillary running parallel to the Henle's loop – Vasa recta
A minute vessel of the network that runs parallel to the Henle's loop forming a 'U' shaped vasa recta. Vasa recta is highly reduced in the cortical nephrons.

12. Fill in the gaps:

- (a) Ascending limb of Henle's loop is _____ to water whereas the descending limb is _____ to it.
(b) Reabsorption of water from distal parts of the tubules is facilitated by hormone _____.
(c) Dialysis fluid contains all the constituents as in plasma except _____.
(d) A healthy adult human excretes (on an average) _____ gm of urea/day

Solution:

- (a) Impermeable, permeable
(b) Vasopressin (anti-diuretic hormone)
(c) Nitrogenous waste
(d) 25-30

Nss Master Biology Chapter 19:

NSS News ,1987 The biology of hypogean fishes Aldemaro Romero,2013-06-29 Hypogean cave artesian fishes have fascinated researchers even before they were described in the scientific literature in 1842 Since then a number of scientists have used them to justify their own evolutionary ideas from neo Lamarckism to neo Darwinism from neutral evolution to selectionist approaches Research in recent years has shown that these fishes are much more complex in their adaptations to the subterranean environment than previously believed there are those with features expected from living in total darkness complete blindness and depigmentation and poor in nutrients extremely low metabolic rates others differ very little if any from their epigeal surface ancestors in their morphology and physiology but not so in their behavior Some of them even live in nutrient rich environments Actually one of the most overlooked facets of these animals is that there are more species of hypogean fishes without troglomorphisms blindness depigmentation than with troglomorphic ones The study of these apparently unadapted fishes is providing new insights into our understanding of the evolution of phenotypic characters founding effect behavioral and physiological adaptations The 86 species of troglomorphic fishes described so far belong to 18 different families many of which would hardly fit the notion that they were preadapted to conquer the underground environment Further many troglomorphic species show very little genotypic differentiation when compared with their putative ancestors indicating that massive phenotype changes can be achieved via little genetic reorganization a reorganization that mostly affects regulatory genes These and many other topics are discussed in this volume containing 29 papers written by 41 authors from 9 countries Hopefully this volume will convince many other researchers that hypogean fishes represent a unique opportunity to study a concept in evolutionary biology that is only superficially understood convergent evolution **Research Awards Index** ,1989 Ulrich's International Periodicals Directory Carolyn Farquhar Ulrich,1999 *Subject Index of Current Extramural Research Administered by the National Cancer Institute* National Cancer Institute (U.S.),1976 Provides information concerning research grants and contracts supported by the National Cancer Institute TEXT BOOK OF BIOCHEMISTRY Prof. (Dr.) Bhoomika, Dr. Sunita S. Pachori, Abhilasha Gupta, Kuldeep Saini, Mr. Shashank Chaurasiya,2025-09-19 The Textbook of Biochemistry provides a comprehensive understanding of the molecular basis of life systematically covering the fundamental biomolecules and their roles in maintaining biological functions Beginning with biomolecules the book introduces carbohydrates lipids nucleic acids amino acids and proteins highlighting their classification chemical nature and biological significance The section on bioenergetics explores the concepts of free energy enthalpy and entropy distinguishing between endergonic and exergonic reactions and explaining redox potential energy rich compounds and the significance of ATP and cyclic AMP Carbohydrate metabolism is detailed with pathways such as glycolysis the citric acid cycle HMP shunt gluconeogenesis and glycogen metabolism along with clinical conditions like G6PD deficiency glycogen storage diseases and diabetes mellitus The discussion on biological oxidation

emphasizes the electron transport chain oxidative phosphorylation substrate level phosphorylation and the effects of inhibitors and uncouplers Lipid metabolism is explained through the oxidation of fatty acids ketone body metabolism de novo fatty acid synthesis and the biological significance of cholesterol including its conversion into bile acids steroid hormones and vitamin D with attention to disorders such as hypercholesterolemia atherosclerosis fatty liver and obesity Amino acid metabolism covers transamination deamination decarboxylation the urea cycle and its disorders catabolism of phenylalanine and tyrosine and their related diseases such as phenylketonuria albinism alkaptonuria and tyrosinemia It also highlights the synthesis and significance of key biological molecules such as dopamine serotonin 5 HT melatonin noradrenaline and adrenaline alongside heme catabolism hyperbilirubinemia and jaundice The section on nucleic acid metabolism and genetic information transfer describes the biosynthesis and catabolism of purine and pyrimidine nucleotides clinical conditions like gout the structural organization of DNA and RNA DNA replication transcription the genetic code translation and inhibitors of protein synthesis The chapter on enzymes introduces their properties nomenclature and IUB classification followed by enzyme kinetics explained through Michaelis and Lineweaver Burke plots It also addresses enzyme inhibition with examples regulatory mechanisms including induction repression and allosteric regulation and their therapeutic and diagnostic applications Isoenzymes are discussed in medical contexts while the section on coenzymes explains their structures and biochemical functions Altogether this textbook integrates biochemical principles with clinical correlations making it an essential guide for pharmacy medical and life science students bridging molecular understanding with disease mechanisms and therapeutic applications **Peterson's Guide to Graduate and Professional Programs, an Overview** ,1992
