

Chapter 8

1. You have created a simple electrical circuit with a battery, wires, and a light bulb. Which of the following is true about this circuit? (Choose two answers.) a. The battery's positive lead pushes current away from that lead. b. The battery's positive lead pulls current toward that lead. c. The circuit creates a direct current. d. The circuit creates an alternating current.

Answer: B, C. The current, which is the flow of energy from electrons, is negative. As a result, the negative lead on the battery repels the current, pushing the current away from the negative lead. The positive lead attracts the current, pulling the current toward the positive lead. Batteries typically keep the polarity (positive and negative leads) the same, never changing, so the current always flows in one direction, creating a DC circuit.

2. A PC NIC and a switch port create one electrical circuit to use when sending data. The switch creates a (maximum) 1-volt electrical signal with a frequency of 1000 hertz. Which of the following facts are also true? (Choose two answers.) a. The period is 0.0002 of a second b. The phase changes over time. c. The amplitude changes over time. d. The amplitude is 1 volt.

Answer: A, C. The frequency and period are always linked mathematically: $\text{period} = 1/\text{frequency}$ and $\text{frequency} = 1/\text{period}$. The question does not state what kind of encoding is used, so what the encoding changes, so you cannot know whether the phase or amplitude changes over time. However, the amplitude measures the maximum voltage, so the amplitude is 1 volt.

3. A PC NIC and a switch port create one electrical circuit to use when sending data from the PC to the switch. Which of the following facts is it function done by the transmitter? (Choose two answers.) a. Completed the electrical circuit by keeping two wires together on its end b. Sends current on the circuit c. Creates current on the circuit d. Removes noise from the circuit

Answer: A, C. The transmitter and receiver both complete the electrical circuit, on their ends of the circuit, by keeping the two wires together. The transmitter creates current on the circuit, and the receiver sends the
