Sacred Attention Margaret D. McGee, 2010-09 Just One Moment of Close Attention Can Be a Prayer to God. Does God communicate through the natural world? Through the slug on the compost pile, the leaf on the lawn, the stone tumbled on the beach, the air that feeds my lungs, the dreams that fill my nights. How will I know unless I pay attention? From the Introduction: Paying attention is rarely easy to do. It requires focus, patience, and a willingness to slow down traits that are hard to come by in this hurry-up world. But close attention to even one small piece of creation, one object, person, routine, image, word, or scripture can become a prayer to God, opening a channel of communication between you and the Divine to allow for deep spiritual growth. In this inspiring guide, you will discover ways to develop a practice of attention as a means of talking and listening to God. Framed on the Christian liturgical year and paired with images of the seasons of the earth, each chapter includes an insightful and poignant narrative which illustrates the surprising richness to be found in every attention-getting moment. Following each narrative is a prayer, suggested scripture readings, and a specific exercise you can use to develop your own practice of attention as a means to better connect with God. Accessible, humorous, and meaningful, these words and practices will lead you further along your path toward discovering a deeper awareness of yourself and your relationship to all that is around you and within you. **Resources in Education**, 1995

Geodynamics of Rifting P.A. Ziegler, 2015-12-04 This volume contains papers giving an interdisciplinary review of 12 major rift systems from North and South America, Africa, Europe, and Asia. These papers are written by an international group of academic and industrial specialists, each of whom is most knowledgeable about the respective rift. The analyzed rifts were selected on the basis of availability of an as complete as possible geological and geophysical data base. Thirteen papers deal with geodynamic processes governing the evolution of rifts. A comprehensive digest of the available stratigraphic, structural, geophysical, and petrological data, together with an extensive list of references, is provided for each of the analyzed rift systems. The megatectonic setting and dynamics of

evolution of each basin is discussed Geodynamic models are tested against the record of the analyzed rifts The question of active as against passive rifting is addressed The rifts analyzed range in age from Precambrian to Recent and cover a wide spectrum of megatectonic settings There is discussion of the evolution of rifts in a plate tectonic frame The case histories are followed by discussions addressing the global setting of rifts and geodynamic processes active during the development of rifted basins Initial Reports of the Deep Sea Drilling Project Scripps Institution of Oceanography,1969 **Structural Design in Wood** Judith J.
