November 2014 Physics Exemplar:

Physics and Literature Aura Heydenreich, Klaus Mecke, 2021-12-20 Physics and Literature is a unique collaboration between physicists literary scholars and philosophers the first collection of essays to examine together how science and literature beneath their practical differences share core dimensions forms of questioning thinking discovering and communicating insights This book advances an in depth exploration of relations between physics and literature from both perspectives It turns around the tendency to discuss relations between literature and science in one sided and polarizing ways The collection is the result of the inaugural conference of ELINAS the Erlangen Center for Literature and Natural Science an initiative dedicated to building bridges between literary and scientific research ELINAS revitalizes discussion of science literature interconnections with new topics ideas and angles by organizing genuine dialogue among participants across disciplinary lines The essays explore how scientific thought and practices are conditioned by narrative and genre fiction models and metaphors and how science in turn feeds into the meaning making of literary and philosophical texts These interdisciplinary encounters enrich reflections on epistemology cognition and aesthetics

Pathological Lives Steve Hinchliffe, Nick Bingham, John Allen, Simon Carter, 2016-12-21 Pandemics epidemics and food borne diseases are a major global challenge Focusing on the food and farming sector and mobilising social theory as well as empirical enquiry Pathological Lives investigates current approaches to biosecurity and ask how pathological lives can be successfully regulated without making life more dangerous as a result Uses empirical and social theoretical resources developed in the course of a 40 month research project entitled Biosecurity borderlands Focuses on the food and farming sector where the generation and subsequent transmission of disease has the ability to reach pandemic proportions Demonstrates the importance of a geographical and spatial analysis drawing together social material and biological approaches as well as national and international examples The book makes three main conceptual contributions reconceptualising disease as situated matters the spatial or topological analysis of situations and a reformulation of biopolitics Uniquely brings together conceptual development with empirically and politically informed work on infectious and zoonotic disease to produce a timely and important contribution to both social science and to policy debate

Nuclear Physics: Present and Future Walter Greiner, 2014-09-17 State of the art survey by leading experts in the field Major foci are superheavy nuclei and neutron rich exotic nuclei In addition new developments in nuclear fission and nuclear cluster decay are shown Finally developments in relativistic heavy ion collisions and the physics of supercritical fields are detailed

Discrete Cosine Transform, Second Edition Humberto Ochoa-Dominguez, K. R. Rao, 2019-04-18 Many new DCT like transforms have been proposed since the first edition of this book For example the integer DCT that yields integer transform coefficients the directional DCT to take advantage of several directions of the image and the steerable DCT The advent of higher dimensional frames such as UHDTV and 4K TV demand for small and large transform blocks to encode small or large similar areas respectively in an efficient way

Therefore a new updated book on DCT adapted to the modern days considering the new advances in this area and targeted for students researchers and the industry is a necessity **British Women Travellers** Sutapa Dutta,2019-08-21 This book studies the exclusive refractive perspectives of British women who took up the twin challenges of travel and writing when Britain was establishing itself as the greatest empire on earth Contributors explore the ways in which travel writing has defined women s engagement with Empire and British identity and was inextricably linked with the issue of identity formation With a capacious geographical canvas this volume examines the multifaceted relations and negotiations of British women travellers in a range of different imperial contexts across continents from America Africa Europe to Australia

Cosmos, Values, and Consciousness in Latin American Digital Culture Angelica J. Huizar,2020-05-19 This book understands digital cultural production of electronic literatures and digital art by looking at electronic and digital works that produce subjective positionality clouded knowledges of quantum theories and metaphysical patterns grounded in a cultural ideology This book underlines a conceptual framework for understanding how digital media impacts reading approaching and even interpreting social reality The qualitative analyses interpret the current zeitgeist and the works selected speak of the diverse sometimes regionalized and often multi ethnic reality of the Latin American experience The analyses elaborate on how artists reflect both the world they live in and a universal consciousness These artists are not simply digitalizing literature and these works are more than techy creations rather they make us think of other directions and connections

Is There Purpose in Biology? Denis Alexander,2018-06-22 Atheists assert that the natural world has no meaning or purpose Dr Denis Alexander Emeritus Director of The Faraday Institute for Science and Religion at St Edmunds College Cambridge draws a different conclusion Not only do recent evolutionary biological data appear inconsistent with the claim that the world is purposeless but the Christian doctrine of creation has provided and continues to provide both context and stimulus for the study of the natural world Christians started biology However is a belief in an omnipotent benign Creator consistent with a world of pain and suffering From a lifetime s study in the biological sciences Denis Alexander believes that whilst the cost of existence is extremely high it can nonetheless be squared with the idea of a God of love whose ultimate purposes for humankind render that cost more comprehensible Not Here, Not Now Anthony Dunne,Fiona

Raby,2025-05-06 What it means to design at a time when for many people the future seems to have become an impossibility When reality fails us what can designers do Question design s relationship to reality as Anthony Dunne and Fiona Raby do in this exhilarating yet thoughtful journey to the edges of science philosophy and literature to find new ways of thinking about the possible and about the meaning function and place of design in that speculative world of not here not now A conceptual travelogue of sorts Not Here Not Now brings together words images and objects that capture in design form some of the ideas encountered along the way Itself a design experiment the richly illustrated book explores ways to bring these ideas into conversation with objects through imagined archives libraries glossaries taxonomies lists tales and essays The design

responses in Not Here Not Now to a stone raft for example or a vegetable lamb swatches of imaginary colors a pocket universe in the home objects undergoing space time collapse are like the most compelling utopias impossible by design aiming instead to nourish the creative intellectual and imaginative ground from which new possibilities still unknown might begin to emerge

How Humans Recognize Objects: Segmentation, Categorization and Individual Identification Chris Fields, 2016-08-18

Human beings experience a world of objects bounded entities that occupy space and persist through time Our actions are directed toward objects and our language describes objects We categorize objects into kinds that have different typical properties and behaviors We regard some kinds of objects each other for example as animate agents capable of independent experience and action while we regard other kinds of objects as inert We re identify objects immediately and without conscious deliberation after days or even years of non observation and often following changes in the features locations or contexts of the objects being re identified Comparative developmental and adult observations using a variety of approaches and methods have yielded a detailed understanding of object detection and recognition by the visual system and an advancing understanding of haptic and auditory information processing Many fundamental questions however remain unanswered What for example physically constitutes an object How do specific classically characterizable object boundaries emerge from the physical dynamics described by quantum theory and can this emergence process be described independently of any assumptions regarding the perceptual capabilities of observers How are visual motion and feature information combined to create object information How are the object trajectories that indicate persistence to human observers implemented and how are these trajectory representations bound to feature representations How for example are point light walkers recognized as single objects How are conflicts between trajectory driven and feature driven identifications of objects resolved for example in multiple object tracking situations Are there separate what and where processing streams for haptic and auditory perception Are there haptic and or auditory equivalents of the visual object file Are there equivalents of the visual object token How are object identification conflicts between different perceptual systems resolved Is the common assumption that persistent object is a fundamental innate category justified How does the ability to identify and categorize objects relate to the ability to name and describe them using language How are features that an individual object had in the past but does not have currently represented How are categorical constraints on how objects move or act represented and how do such constraints influence categorization and the re identification of individuals How do human beings re identify objects including each other as persistent individuals across changes in location context and features even after gaps in observation lasting months or years How do human capabilities for object categorization and re identification over time relate to those of other species and how do human infants develop these capabilities What can modeling approaches such as cognitive robotics tell us about the answers to these questions Primary research reports reviews and hypothesis and theory papers addressing questions relevant to the understanding of perceptual object

segmentation categorization and individual identification at any scale and from any experimental or modeling perspective are solicited for this Research Topic Papers that review particular sets of issues from multiple disciplinary perspectives or that advance integrative hypotheses or models that take data from multiple experimental approaches into account are especially encouraged ESRC Newsletter ,1985
