- ♥ Verbalize and demonstrate effective chest compressions
- ♥ Verbalize and demonstrate intubation or assisting intubation if applicable for your job
- ♥ Verbalize the medications used in neonatal resuscitation with the indications, route and dose for each
- ♥ Verbalize the special considerations and subsequent management of infants beyond the immediate newborn period or outside the hospital delivery room.

Study Guide for 2011 NRP, 6th edition

The Neonatal Resuscitation Program (NRP) will help you learn the skills needed to resuscitate newborns. The *Baby Saver III* study guide reflects the 2011, 6th edition NRP updates provided by the American Academy of Pediatrics in conjunction with the American Heart Association.

Lesson 1 – Overview and Principles of Resuscitation

Approximately 10% of all newborns require some assistance to begin breathing at birth and about 1% will need extensive resuscitative measures. Careful examination of risk factors may not identify all babies at risk for resuscitation. When resuscitation is anticipated additional personnel should be present in the delivery room at the time of the delivery. One skilled person is required of all deliveries and 2 skilled persons for high risk deliveries. When twins are expected 4 skilled persons are required. Keep in mind that all newborns require initial assessment to determine whether resuscitation is required. Chest compressions and medications are rarely needed when resuscitation is required.

There are 3 questions you should ask yourself to help you decide the need of resuscitation:

- ♥ Is the baby term
- ♥ Is the baby breathing and crying
- ♥ Does the baby have good muscle tone
