Who Gets In? Rebecca Zwick,2017-05-15 On the disputed topic of U S college admissions everyone agrees that this high stakes competition is unfair But few agree on what a fair process would be Stressing transparency in evaluating applicants Rebecca Zwick assesses the goals and criteria of different admissions policies and shows how they can fail to produce the desired results

The Boy Crisis Warren Farrell,John Gray,2018-03-13 What is the boy crisis It s a crisis of education Worldwide boys are 50 percent less likely than girls to meet basic proficiency in reading math and science It s a crisis of mental health ADHD is on the rise And as boys become young men their suicide rates go from equal to girls to six times that of young women It s a crisis of fathering Boys are growing up with less involved fathers and are more likely to drop out of school drink do drugs become delinquent and end up in prison It s a crisis of purpose Boys old sense of purpose being a warrior a leader or a sole breadwinner are fading Many bright boys are experiencing a purpose void feeling alienated withdrawn and addicted to immediate gratification So what is The Boy Crisis A comprehensive blueprint for what parents teachers and policymakers can do to help our sons become happier healthier men and fathers and leaders worthy of our respect

Multifaceted Roles of Crystallography in Modern Drug Discovery Giovanna Scapin,Disha Patel,Eddy Arnold,2015-02-27 The present work offers a snapshot of the state of the art of crystallographic analytical and computational methods used in modern drug design and development Topics discussed include drug design against complex systems membrane proteins cell surface receptors epigenetic targets and ribosomes modulation of protein protein interactions the impact of small molecule structures in drug discovery and the application of concepts such as molecular geometry conformation and flexibility to drug design methodologies for understanding and characterizing protein states and protein ligand interactions during the drug design process and monoclonal antibody therapies These methods are illustrated through their application to problems of medical and biological significance such as viral and bacterial infections diabetes autoimmune disease and CNS diseases As approaches to drug discovery have changed over time so have the methodologies used to solve the varied new and difficult problems encountered in drug discovery In recent years we have seen great progress in the fields of genetics biology chemistry and medicine but there are still many unmet medical needs from bacterial infections to cancer to chronic maladies that require novel different or better therapies This work will be of interest to researchers and policy makers interested in the latest developments in drug design

Núñez,Raquel Gilar-Corbi,Iván Manuel Jorrín Abellán,2021-02-24 *Nonlinear Analysis in Neuroscience and Behavioral Research* Tobias A. Mattei,2016-10-31 Although nonlinear dynamics have been mastered by physicists and mathematicians for a long time as most physical systems are inherently nonlinear in nature the recent successful application of nonlinear

methods to modeling and predicting several evolutionary ecological physiological and biochemical processes has generated great interest and enthusiasm among researchers in computational neuroscience and cognitive psychology. Additionally, in the last years it has been demonstrated that nonlinear analysis can be successfully used to model not only basic cellular and molecular data but also complex cognitive processes and behavioral interactions. The theoretical features of nonlinear systems such as unstable periodic orbits, period doubling, bifurcations, and phase space dynamics have already been successfully applied by several research groups to analyze the behavior of a variety of neuronal and cognitive processes. Additionally, the concept of strange attractors has led to a new understanding of information processing which considers higher cognitive functions such as language, attention, memory, and decision making as complex systems emerging from the dynamic interaction between parallel streams of information flowing between highly interconnected neuronal clusters organized in a widely distributed circuit and modulated by key central nodes. Furthermore, the paradigm of self-organization derived from the nonlinear dynamics theory has offered an interesting account of the phenomenon of emergence of new complex cognitive structures from random and non-deterministic patterns, similarly to what has been previously observed in nonlinear studies of fluid dynamics. Finally, the challenges of coupling massive amounts of data related to brain function generated from new research fields in experimental neuroscience such as magnetoencephalography, optogenetics, and single-cell intraoperative recordings of neuronal activity have generated the necessity of new research strategies which incorporate complex pattern analysis as an important feature of their algorithms. Up to now, nonlinear dynamics has already been successfully employed to model both basic single and multiple neurons' activity such as single-cell firing patterns, neural networks synchronization, autonomic activity, electroencephalographic measurements, and noise modulation in the cerebellum, as well as higher cognitive functions and complex psychiatric disorders. Similarly, previous experimental studies have suggested that several cognitive functions can be successfully modeled with basis on the transient activity of large-scale brain networks in the presence of noise. Such studies have demonstrated that it is possible to represent typical decision-making paradigms of neuroeconomics by dynamic models governed by ordinary differential equations with a finite number of possibilities at the decision points and basic heuristic rules which incorporate variable degrees of uncertainty. This e-book has included frontline research in computational neuroscience and cognitive psychology involving applications of nonlinear analysis, especially regarding the representation and modeling of complex neural and cognitive systems. Several expert teams around the world have provided frontline theoretical and experimental contributions as well as reviews, perspectives, and commentaries in the fields of nonlinear modeling of cognitive systems, chaotic dynamics in computational neuroscience, fractal analysis of biological brain data, nonlinear dynamics in neural networks research, nonlinear and fuzzy logics in complex neural systems, nonlinear analysis of psychiatric disorders, and dynamic modeling of sensorimotor coordination. Rather than a comprehensive compilation of the possible topics in neuroscience and cognitive research to which non-linear may be used, this e-book intends

to provide some illustrative examples of the broad range of Smelter Grade Alumina from Bauxite Benny E. Raahauge, Fred S. Williams, 2022-01-23 This book provides a comprehensive review of the production of smelter grade alumina from bauxite ores It emphasizes the best practices applied in the industry today but seen in a historical context with a view to future challenges and developments The control of alumina quality is discussed in detail including the effects that alumina quality have on the aluminum smelter process with respect to environmental performance current efficiency and metal purity The discussion of alumina quality will be relevant to people on the smelter side as this is the interface between refinery and smelter Emphasis is placed on the major steps of the Bayer Process including digestion clarification precipitation calcination and management of water energy and bauxite residue This book is a valuable resource for active seasoned practitioners and for new engineers entering the industry

Authentic Assessment and Evaluation Approaches and Practices in a Digital Era, 2021-09-06 In this book 37 international academics illustrate how authentic assessment is an effective measure of intellectual achievement as it requires the demonstration of deep understanding and complex problem solving through the performance of exemplary tasks By exploring the concept of authentic assessment in both tertiary and school education the authors in these chapters argue that authentic assessment is not only the measurement of significant intellectual accomplishments but also an important pedagogical structure Authentic assessment is a concept more closely defined as an umbrella term that seeks to immerse learners in environments where they can gain highly practical and lifelong learning skills Authentic assessment has been on the educational agenda for a number of years and keeps being a powerful tool for assessing students 21st century competencies in the context of global educational reforms Contributors are Pinar Akyildiz Fatma Nur Akta Chrysoula Arcoudis Tasos Barkatsas Michael Belcher Antonios Bouras Athina Chalkiadaki Jere Confrey Rebecca Cooper Yksel Dede Paul Denny Zara Ersozlu Ivan Fortunato Linda Hobbs Marj Horne Fragkiskos Kalavasis Katerina Kasimatis Belinda Kennedy Gillian Kidman Huk Yuen Law Susan Ledger Kathy Littlewood Jiabo Liu Michelle Ludecke Tricia McLaughlin Juanjo Mena Andreas Moutsios Rentzos Greg Oates Anastasia Papadopoulou Fabiano Pereira dos Santos Angela Rogers Grinne Ryan Rebecca Seah Meetal Shah Hazel Tan Naomi Wilks Smith Dallas Wingrove Qiaoping Zhang and Xiaolei Zhang
