1. List 4 new features supported by NTFS that are not supported on any of the FAT systems.

1. Name Technology File System (NTFS)

NTFS supports the creation of user and group accounts with different levels of access to folders and files (it was this feature in Windows XP Professional, the whole (single file sharing) and the use of the grouping file system (NTFS) for user-specific encryption of individual files and folders. NTFS support access for Windows version 5.0 file systems such as FAT 3.2 (single share), FAT 3.2 (local hard disk), and FAT for single hard disk, the new support user and group accounts, but do they include the folder encryption.

2. Name 4 types of examples of the four categories of authentication.

Something the user knows -- for example, a password or PIN

Something the user has -- for example, a smart card or other security token

Something the user is -- for example, the biometric reading of a fingerprint or retina scan

Something the user does -- for example, a signature

3. What types of software can be used to protect against viruses and malware?

Protection against viruses and malware is a necessary protection for every type of computing device. This includes (1) the user. Computer protection tools that include antivirus, anti-malware, and software, and anti-phishing protection are used along with other security measures. But what users prefer is "best of breed" approach that uses the best available products in each category.

The most important thing you can remember when attempting to protect against viruses and malware is to keep your anti-malware application up to date. The second most important thing is to update the definition data, whether it comes via email, or USB flash drive, or from elsewhere.
