- Earth as a Sphere
 - Pythagoras: First to call the Earth Round
 - Plato: The Earth is spherical
 - Aristotle: Gave first arguments
 - Plato argued that because a sphere is a perfect shape, Earth must be spherical but had no explanation.
 - Aristotle
 - Shape of Earth's shadow at lunar eclipse appears circular.
 - Different stars are visible at northern and southern latitudes.
- So how big is the Earth?
 - First person to attempt to measure the Earth
 - Used shadows cast from sun to calculate the Earth's circumference used to ~40,000km, which was a very accurate estimate
 - Measured the tilt of the Earth axis as 23.5 degrees (gives us seasons)
 - Experiment:
 - Eratosthenes knew that at noon on the summer solstice the sun shone directly to the bottom of a well at Syene (now Aswan), Egypt
 - He found that at the same time, in Alexandria, Egypt, approximately 800 km due north of Syene, the angle of inclination of the sun's rays was about 7.2 degrees
 - He estimated the girth of Earth as 250,000 stadia.
 - How long was a stadion (or stade)?
 - Estimated by modern scholars as between 157 and 167 m
 - Earth's circumference between 39,250 km and 41,750 km.
- Distance to Sun and Moon
 - Aristarchus figured out how to measure the relative distances to the sun and the moon
 - His estimate was a bit off but showed that the Sun was 19 times farther away from the moon.
 - He wasn't close, he was quite far - the sun is 400 times farther from us than the moon
 - Size of the moon
 - He measured the angular size of Earth's shadow on the Moon from the positions of the moon before and after a lunar eclipse. He could then compare this angular size to the angular size of the Moon and estimate the size of the moon relative to Earth.
 - Size of the sun
 - He also reasoned that since the Sun and the Moon have the same angular size, but the Sun was estimated to be 19 times farther away, then the Sun must be 19 times bigger than the moon.
 - Proposed the Heliocentric Solar System.
 - His method was correct but he made an error when measuring the angle. He estimated it was 87 degrees which led to his conclusion that the Sun was 19 times larger than the moon. Theta is actually 15 arcminutes or 0.25 degrees.
- Scaling of Sizes
 - If the Sun were to be represented by 100 mm-diameter softball, how big would Earth be?
 - Jupiter: 10 mm
 - Earth: 1 mm
- Geocentric Model
 - According to Plato, Earth was at the center of the universe. The stars and planets were carried around the Earth on spheres of circles, arranged in the order (outwards from the

Deep Learning Siddhartha Bhattacharyya, Vaclav Snasel, Aboul Ella Hassanien, Satadal Saha, B. K. Tripathy, 2020-06-22

This book focuses on the fundamentals of deep learning along with reporting on the current state of art research on deep learning. In addition, it provides an insight of deep neural networks in action with illustrative coding examples. Deep learning is a new area of machine learning research which has been introduced with the objective of moving ML closer to one of its original goals i.e. artificial intelligence. Deep learning was developed as an ML approach to deal with complex input output mappings. While traditional methods successfully solve problems where final value is a simple function of input data, deep learning techniques are able to capture composite relations between non immediately related fields for example between air pressure recordings and English words, millions of pixels and textual description, brand related news and future stock prices and almost all real world problems. Deep learning is a class of nature inspired machine learning algorithms that uses a cascade of multiple layers of nonlinear processing units for feature extraction and transformation. Each successive layer uses the output from the previous layer as input. The learning may be supervised e.g. classification and or unsupervised e.g. pattern analysis manners. These algorithms learn multiple levels of representations that correspond to different levels of abstraction by resorting to some form of gradient descent for training via backpropagation. Layers that have been used in deep learning include hidden layers of an artificial neural network and sets of propositional formulas. They may also include latent variables organized layer wise in deep generative models such as the nodes in deep belief networks and deep boltzmann machines. Deep learning is part of state of the art systems in various disciplines particularly computer vision, automatic speech recognition, ASR and human action recognition. *Resources in Education*, 1971-07 *Research in Education*, 1971-12

Catalog of Copyright Entries. Third Series Library of Congress. Copyright Office, 1973 Discourses and Narrations in the Biosciences Brian Hurwitz, Paola Spinozzi, 2011. *Discourses and Narrations in the Biosciences* investigates the forms of writing in which scientific claims are formulated and announced. Argumentative strategies, compositional rules and figurative expressions in communication and narrativization of scientific knowledge are the focus of interdisciplinary contributions by humanities and science scholars. The first part of the book dedicated to Rhetorical and Epistemological Aspects of Science Writing addresses how scientific pursuits and methods feed into multi level texts that generate responses within science society and culture. The second part entitled Bioscientific Discourses and Narrations examines popularisations and fictionalizations of science in relation to diversity, deviancy, ageing, illness, reproduction, the evolution of humankind, mathematical models of biomedical systems and the myth of the heroic scientist. Assessing the narrative impetus and command of literary and meta discursive strategies shown by contemporary science writers enhances understanding of the methods and conventions through which the biosciences produce knowledge. **THE Journal**, 2005 *Encyclopedia of Microcomputers* Allen Kent, James G. Biologically Inspired Cognitive Architectures 2012 Antonio Chella, Roberto Pirrone, Rosario Sorbello, Kamilla Rún Jóhannsdóttir, 2012-09-29 The challenge of creating a real life computational equivalent of the human mind requires that we better understand at a computational level how natural intelligent systems develop their cognitive and learning functions In recent years biologically inspired cognitive architectures have emerged as a powerful new approach toward gaining this kind of understanding here biologically inspired is understood broadly as brain mind inspired Still despite impressive successes and growing interest in BICA wide gaps separate different approaches from each other and from solutions found in biology Modern scientific societies pursue related yet separate goals while the mission of the BICA Society consists in the integration of many efforts in addressing the above challenge Therefore the BICA Society shall bring together researchers from disjointed fields and communities who devote their efforts to solving the same challenge despite that they may speak different languages This will be achieved by promoting and facilitating the transdisciplinary study of cognitive architectures and in the long term perspective creating one unifying widespread framework for the human level cognitive architectures and their implementations This book is a proceedings of the Third Annual Meeting of the BICA Society which was held in Palermo Italy from October 31 to November 2 2012 The book describes recent advances and new challenges around the theme of

understanding how to create general purpose humanlike artificial intelligence using inspirations from studies of the brain and the mind
