

Find the slope of your graph-what does it tell you about the speed of the boat?

$$\text{Slope} = \frac{\text{rise}}{\text{run}} = \frac{\Delta y}{\Delta x} = \bigcirc$$

A horizontal line has a slope of zero, and that means that the speed stays constant as time passes.

The slope of a line on a speed-time graph indicates that an object is either speeding up or slowing down.

Object A: increasing its speed (positive slope)

Object B: decreasing its speed (negative slope)

The slope of the line of a speed-time graph indicates the distance the object travels.

How far did the boat travel using the graph?
