

Activity 1.1.2 Simple Machines Practice

Procedure

Solve the following problems regarding simple machines systems. Each question requires proper illustration and calculation, including labeling of forces, distances, effort(s), and resistance values. Illustrations should include variables of force, weight, mechanical advantage rather than machine phenomena. Be sure to document all calculation steps and use proper units.

All problems require students should include related illustrations and an effort force.

Simple Machines – Lever

1. A first class lever is in static equilibrium with a 100 N resistance force and 20 N effort force. The lever is effort force is located 4 m from the fulcrum.

1. Sketch and calculate the lever system described above.

--

2. What is the ideal mechanical advantage of the system?

Formula	Substitution/Equation	Final answer

3. Using static equilibrium related terms, calculate the length from the fulcrum to the resistance force.
