- 5 The atomic number would be 15 and the mass number would be 32. The symbol for phosphorus is P. The standard notation is $^{32}_{15}\text{P}$.
- 6 The number of neutrons may vary in all the isotopes of a particular element. Hence, an element may have different mass numbers.
- 7 The four major elements found in living things are oxygen, carbon, hydrogen and nitrogen.
- 8 Radioactive isotopes are used as a source of radiation in therapy and as tracers to tag particular compounds.
- 9 A compound is a pure substance made up of more than one type of atom held together by chemical bonds.
- 10 Ionic compounds are composed of cations and anions, which form ionic bonds. Molecular compounds result from atoms sharing their electrons to form covalent bonds. Molecular compounds vary in their solubility in water depending upon their polar nature. Ionic compounds are generally more soluble in water than molecular compounds.
- 11 Molecular compounds result from the sharing of electrons between non-metal elements, whereas ionic compounds are composed of ions and result from the transfer of electrons between metallic and non-metallic elements. As a result of the charges carried, ionic compounds tend to be more readily dissolved in water compared to molecular compounds.

Mahoney, 2012-12-06 Whatever else it may be psychotherapy offers a clear form of human compassion channeled through myriad assumptions about the causes and solutions of human distress There has of course been a longstanding debate about whether the psychotherapist is best described and trained as an artisan or a scientist Volumes of scholarly argument have also addressed such themes as the essential ingredients of psychotherapy the role of technique the

importance of client characteristics and the significance of the therapist's personality Experts have defended a wide range of opinions on these issues and have mustered evidence to support their individual claims The purpose of the present volume is neither to defend nor to expand any specific claim about psychotherapy Rather it is intended to be a heuristic compendium of contemporary views on this humane endeavor At the most basic level of analysis the field of psychotherapy research now faces three fundamental questions 1 Is psychotherapy effective 2 When and why is it effective 3 How should psychotherapists be trained The latter two questions obviously presume that the first can be answered affirmatively Although I would hardly defend the generalization that all forms of psychotherapy are effective for all clients it is equally clear that there is now ample warrant for the contention that some of the things we do in our fifty minute hours seem to have positive effects
