Hey, what's going on? Without warning, the lights go out, your computer shuts down, your music stops, and your clock goes blank. No electricity! Quick, where are the candles?

Without electricity, your life would be different in just about every way. Imagine, for example, what your food would be like if you could not run all the appliances you use to prepare and cook it. Imagine not being able to listen to your music CDs or use the computer.

Look at this photo of North and South America. What does it tell you about the importance of electricity in our lives? Compare a brightly lit area with an unlit area. How would life be different in a place that has no light? Find British Columbia on the map. Can you recognize some of the land? Notice that not every place is brightly lit. Why are these areas not bright?

In this unit, you will discover what electricity is and the remarkable things it does for you. You will build electric circuits that can power light bulbs. You will also look at the production and transmission of electricity in British Columbia. As you learn about electricity, think about how much you depend on and use electricity, where you get the electricity you need, and why you need to conserve electricity.

TRY THIS: USING ELECTRICITY

Skills Focus: questioning, hypothesizing, inferring

Imagine how different your life would be if there were no electricity. Think about some of the electrical appliances in your home. Copy the following table into your notebook. In your table, list five appliances in your home. What purpose does each appliance have? What did people do before they had electricity to run the appliance? The first row is filled in as an example.

Appliance that uses electricity	Purpose of appliance	What people did before they had electricity
A electric lamp	To provide light	used candles or oil to get light when the Sun went down

• This is what North America and South America look like at night.
