Simulation Scenarios for Nursing Educators, Third Edition Suzanne Hetzel Campbell, Karen Daley, 2017-10-28 Second Edition was a winner of the AJN Award Unique to this book and what sets it apart from other books on simulations and clinical scenarios are the personal experiences that the authors bring to the chapters The authors passion enthusiasm and inspiration are truly reflected and demonstrated in each chapter Authors talk about lessons learned teaching strategies and in depth research Key highlights in the book include the practice application of how to develop implement and evaluate clinical simulations in your nursing program The authors make understanding simulation pedagogy an easy journey and one that is exciting that educators will want to try and embrace even when there is hesitation and uncertainty Pamela R Jeffries PhD RN FAAN ANEF Professor Dean George Washington University School of Nursing From the Foreword When employed as a substitute for real clinical time simulation scenarios have proven effective in bridging the gap between theory and practice Written by educators for educators this book provides all the knowledge skills and tools needed to make simulation feasible enjoyable and meaningful for students In this edition there are 25 new chapters 20 of them scenarios for all levels and specialties and 11 of those representing interprofessional education and team training This acclaimed text for nursing faculty provides detailed step by step guidance on all aspects of clinical simulation Each scenario is broken down into objectives pre scenario checklists implementation plans evaluation criteria debriefing guidelines and recommendations for further use Replete with diverse scenarios this comprehensive resource covers geriatric pediatric trauma obstetric and community based patient scenarios Chapters cover all levels of nursing students from pre licensure to doctoral level and contain the authors own advice and experiences working in simulation around the globe All scenarios have been updated to adhere to the new best practice simulation standards for design facilitator and participant criteria interprofessional criteria and debriefing processes A template for creating scenarios spans the text and includes student preparation materials forms to enhance the realness of the scenario and checklists for practice assessment and evaluation The revised edition now includes scenarios easily adaptable to an instructor s own lab an international perspective and a section on graduate nursing education and eleven new interdisciplinary clinical scenarios New to the third edition 20 brand new scenarios in anesthesia midwifery pediatric disaster and other specialty focused situations plus five new chapters Updated to encompass new simulation pedagogy including best practice standards New scenarios easily adapted to an instructor s own lab Integrating disability into nursing education with standardized patients and the use of IV simulations Interprofessional and international scenarios focused on areas of global concern obstetric hemorrhage neonatal hypoglycemia deteriorating patients A new section on how to write like a nurse in clinical simulation environments Teaching and evaluating therapeutic communication with a review of instruments for assessment Key Features Includes information on how to integrate simulation into curricula Addresses conceptual and theoretical foundations of simulation in nursing education including an expanded chapter on the Framework for Simulation Learning in Nursing Education Includes a wide variety of practical scenarios in ready to use

format with instructions Provides a template for scenario development Delivers recommendations for integration of point of care decision making tools Offers opportunities for enhancing complexity incorporating interprofessional competencies and debriefing guidelines Provides insight into pedagogical intergration of simulation throughout every aspect of the nursing curriculum with scenarios mapped to North American standards and the NCLEX RN Blueprint Includes details on learning lab and staff development from fundraising and building a lab Ch 6 to placement of AV Ch 7 to faculty development Ch 5 and self assessment for certification and accreditation Ch 54 A trauma informed approach to women s health Ch 33 Scenarios with authors from North America USA Canada Brazil and Hong Kong *Neonatal and Pediatric Cerebro-Cardiopulmonary Resuscitation* Utpal Bhalala,Graeme Polglase,Eugene Dempsey,Michael Shoykhet,2018-11-16 Pediatric resuscitation medicine has witnessed significant advances with improved understanding of the pathophysiology of cardiac arrest and resuscitation Multiple mechanisms of neurological injury have been identified outlining potential avenues for neuroprotection following cardiac arrest Resuscitation science exists at multiple levels of analysis from biomechanics of chest compressions to implementation of best training procedures in real time from epidemiology of cardiac arrest survival to molecular mechanisms of cellular injury due to ischemia and reperfusion What next steps in research and in clinical practice will ensure the best possible neurologic outcome among children who survive cardiac arrest How can we leverage novel technologies in neuroimaging nanomaterials drug delivery biomarker based risk stratification and next generation sequencing among others to resuscitate and to protect the Central Nervous System CNS How can we improve clinical trial design and data analyses to maintain a robust clinical research infrastructure and to ensure validity and applicability These are just some of the questions will addressed in this Research Topic Using evidence based algorithms and public health approaches to disseminate them the last decade has seen a paradigm shift in pediatric resuscitation with significantly improved survival from pediatric cardiac arrests However neurologic outcome in survivors remains far from optimal High quality CPR is increasingly recognized as a key factor for improving neurologic outcomes Advanced technologies allow monitoring the quality of CPR and just in time feedback to improve the quality of CPR Further research is needed to evaluate impact of these technologies on neurologic outcome The recent American Heart Association CPR guidelines emphasis on Circulation Airway Breathing CAB approach to CPR needs a careful evaluation in children in whom timely airway and breathing support are as important as circulation The growing controversy regarding use of epinephrine and alternative routes of administration of epinephrine during CPR warrants further evaluation in the setting of pediatric CPR Improved outcome of hemodynamic goal directed CPR over standard CPR in animal models of cardiac arrest has initiated interest in physiology based CPR especially in the in hospital cardiac arrest Basic and applied science research have become relevant for specific subpopulations of pediatric cardiac arrest victims and circumstances e g ventricular fibrillation neonates congenital heart disease extracorporeal cardiopulmonary resuscitation Just in time and just in place simulation training which have evolved as training strategies to

improve quality of CPR are being evaluated for outcomes The concept of just in time and just in place coaching of CPR providers on high quality CPR is a novel concept which has emerged recently and remains unstudied Whilst there have been significant advances in newborn stabilization over the last decade many questions remain unanswered These include the role of delayed cord clamping in preterm infants and term newborns requiring resuscitation the role of sustained inflations as a method of respiratory support and the role of epinephrine and volume administration in neonatal resuscitation Novel methods of assessment including the use of end tidal CO₂ monitoring respiratory function monitoring and near infrared spectroscopy warrant further evaluation The use of transitioning animal models that accurately replicate the newborn circulation with patent fetal shunts are emerging but more assessments in these are required to better establish CPR strategies in newborn infants Newborn resuscitation training programs have resulted in a reduction in neonatal mortality in the developing world but key questions remain around the frequency of training team training methods and the role of simulation training Post resuscitation interventions in particular therapeutic hypothermia has resulted in significant improvements in long term outcome and there is now a growing interest in adjunct therapies such as use of melatonin erythropoietin or other neuroprotective molecules to improve therapeutic benefits of cooling Therapeutic hypothermia did not provide any higher benefit than normothermia in children following out of hospital cardiac arrest although there is considerable debate in the community whether 14% probability of observing a similar outcome if the study were repeated a 100 times applies to an individual child in the PICU Exciting research is occurring in unraveling connection between inflammation immune dysregulation and neuroinjury This will further support research on the use of anti inflammatory agents and immunomodulators for neuroprotection after cardiac arrest and birth asphyxia
