Netezza Developer Guide:

DB2 Developer's Guide Craig Mullins, 2012 DB2 Developer's Guide is the field's 1 go to source for on the job information on programming and administering DB2 on IBM z OS mainframes. Now three time IBM Information Champion Craig S Mullins has thoroughly updated this classic for DB2 v9 and v10. Mullins fully covers new DB2 innovations including temporal database support, hashing, universal tablespaces, pureXML, performance, security, and governance improvements, new data types, and much more. Using current versions of DB2 for z OS, readers will learn how to build better databases and applications for CICS, IMS, batch, CAF, and RRS/AF. Write proficient code, optimized DB2 SQL. Implement efficient dynamic and static SQL applications. Use binding and rebinding to optimize applications. Efficiently create, administer, and manage DB2 databases and applications. Design, build, and populate efficient DB2 database structures for online batch and data warehousing. Improve the performance of DB2 subsystems, databases, utilities, programs, and SQL. **DB2 Developer's Guide, Sixth Edition** builds on the unique approach that has made previous editions so valuable. It combines condensed, easy-to-read coverage of all essential topics, information otherwise scattered through dozens of documents. Detailed discussions of crucial details within each topic. Enabling Real-time Analytics on IBM z Systems Platform Lydia Parziale, Oliver Benke, Willie Favero, Ravi Kumar, Steven LaFalce, Cedrine Madera, Sebastian Muszytowski, IBM Redbooks, 2016-08-08. Regarding online transaction processing (OLTP) workloads, IBM z Systems™ platform with IBM DB2 data sharing Workload Manager (WLM), geoplex, and other high-end features is the widely acknowledged leader. Most customers now integrate business analytics with OLTP by running, for example, scoring functions from transactional context for real-time analytics or by applying machine learning algorithms on enterprise data that is kept on the mainframe. As a result, IBM adds investment so clients can keep the complete lifecycle for data analysis, modeling, and scoring on z Systems, control in a cost-efficient way, keeping the qualities of services in availability, security, reliability that z Systems solutions offer. Because of the changed architecture and tighter integration, IBM has shown in a customer proof of concept that a particular client was able to achieve an order of magnitude improvement in performance, allowing that client's data scientist to investigate the data in a more interactive process. Open technologies such as Predictive Model Markup Language (PMML) can help customers update single components instead of being forced to replace everything at once. As a result, you have the possibility to combine your preferred tool for model generation, such as SAS Enterprise Miner or IBM SPSS Modeler, with a different technology for model scoring, such as Zementis, a company focused on PMML scoring. IBM SPSS Modeler is a leading data mining workbench that can apply various algorithms in data preparation, cleansing, statistics, visualization, machine learning, and predictive analytics. It has over 20 years of experience and continued development and is integrated with z Systems. With IBM DB2 Analytics Accelerator 5.1 and SPSS Modeler 17.1, the possibility exists to do the complete predictive model creation, including data transformation, within DB2 Analytics Accelerator. So instead of moving the

data to a distributed environment algorithms can be pushed to the data using cost efficient DB2 Accelerator for the required resource intensive operations This IBM Redbooks publication explains the overall z Systems architecture how the components can be installed and customized how the new IBM DB2 Analytics Accelerator loader can help efficient data loading for z Systems data and external data how in database transformation in database modeling and in transactional real time scoring can be used and what other related technologies are available This book is intended for technical specialists and architects and data scientists who want to use the technology on the z Systems platform Most of the technologies described in this book require IBM DB2 for z OS For acceleration of the data investigation data transformation and data modeling process DB2 Analytics Accelerator is required Most value can be achieved if most of the data already resides on z Systems platforms although adding external data like from social sources poses no problem at all [InfoSphere DataStage Parallel Framework Standard Practices](#) Julius Lerm,Paul Christensen,IBM Redbooks,2013-02-12 In this IBM Redbooks publication we present guidelines for the development of highly efficient and scalable information integration applications with InfoSphere™ DataStage DS parallel jobs InfoSphere DataStage is at the core of IBM Information Server providing components that yield a high degree of freedom For any particular problem there might be multiple solutions which tend to be influenced by personal preferences background and previous experience All too often those solutions yield less than optimal and non scalable implementations This book includes a comprehensive detailed description of the components available and descriptions on how to use them to obtain scalable and efficient solutions for both batch and real time scenarios The advice provided in this document is the result of the combined proven experience from a number of expert practitioners in the field of high performance information integration evolved over several years This book is intended for IT architects Information Management specialists and Information Integration specialists responsible for delivering cost effective IBM InfoSphere DataStage performance on all platforms **IBM Intelligent Operations Center 1.6**
