and its successful use in industry and government goes hand in hand with the success of the CP research community. Constraint programming continues to be an exciting and growing research field as the annual CP conference proceedings amply witness. This year from 158 submissions we chose 46 to be published in full in the proceedings. Instead of selecting one overall best paper we picked out four distinguished papers though we were tempted to select at least 12 such papers. In addition we included 16 short papers in the proceedings; these were presented as posters at CP 2004. This volume includes summaries of the four invited talks of CP 2004. Two speakers from industry were invited. However these were no ordinary industrial representatives but two of the leading researchers in the CP community: Helmut Simonis of Parc Technologies until its recent takeover by Cisco Systems and Jean-François Puget, Director of Optimization Technology at ILOG. The other two invited speakers are also big movers and shakers in the research community: *Effective Surveillance for Homeland Security* by Francesco Flammini, Roberto Setola, and Giorgio Franceschetti, 2013-06-13. *Effective Surveillance for Homeland Security: Balancing Technology and Social Issues* provides a comprehensive survey of the state of the art methods and tools for the surveillance and protection of citizens and critical infrastructures against natural and deliberate threats. Focusing on current technological challenges involving multi-disciplinary problem analysis and systems engineering approaches, it provides an overview of the most relevant aspects of surveillance systems in the framework of homeland security. Addressing both advanced surveillance technologies and the related socio-ethical issues, the book consists of 21 chapters written by international experts from the various sectors of homeland security. Part I: Surveillance and Society focuses on the societal dimension of surveillance, stressing the importance of societal acceptability as a precondition to any surveillance system. Part II: Physical and Cyber Surveillance presents advanced technologies for surveillance. It considers developing technologies that are part of a framework whose aim is to move from a simple collection and storage of information toward proactive systems that are able to fuse several information sources to detect relevant events in their early incipient phase. Part III: Technologies for Homeland Security considers relevant applications of surveillance systems in the framework of homeland security. It presents real-world case studies of how innovative technologies can be used to effectively improve the security of sensitive areas without violating the rights of the people involved. Examining cutting-edge research topics, the book provides you with a comprehensive understanding of the technological, legislative, organizational, and management issues related to surveillance. With a specific focus on privacy, it presents innovative solutions to many of the issues that remain in the quest to balance security with the preservation of privacy that society demands. Operations Research Proceedings 1996 by Uwe Zimmermann, Ulrich Derigs, Wolfgang A. Gaul, Rolf H. Möhring, Karl-Peter Schuster, 2012-12-06. The volume contains a selection of manuscripts of lectures presented at the International Symposium on Operations Research SOR 96. The Symposium took place at the Technical University of Braunschweig, September 3-6, 1996. SOR 96 was organized under the auspices of the two German societies of Operations Research: Deutsche Gesellschaft für

Operations Research DGOR and Gesellschaft für Mathematik Ökonomie and Operations Research GMOOR in cooperation with the Working Group Discrete Optimization of the IFIP WG7.4 Since 1995 DGOR and GMOOR jointly prepare the Symposium as a common annual conference. In particular the annual general meetings of the DGOR, the GMOOR and the WG7.4 took place during the conference. The Symposium had 527 participants from 32 countries around the world including 92 participants from Eastern Europe. The Symposium obviously attracts an international audience of workers fully covering the broad spectrum of Operations Research and related areas in economics, mathematics and computer science. The importance of a highly interdisciplinary field as Operations Research is increasing owing to the growth in applications in related disciplines. Technological advances in computer science and algorithmic mathematics are crucial for attacking the great challenges waiting in the areas of applications of Operations Research effectively. As a participant of SOR 96 one could well observe the current pace of achievements. Many of these results are in these proceedings. The program consisted of two plenary, 17 semi-plenary and 335 contributed lectures in 18 sections.
