These features together with climate change predictions and urban development are affecting the way flood risk is managed. Knowledge and scientific tools play a role of paramount importance in the strain of coping with flooding problems along with capacity building in the context of political and administrative frameworks. Therefore governments need to establish clear institutional financial and social mechanisms and processes for flood risk management in order to ensure the safety of people and property and thereby contribute to flood defence prevention and recovery. The conference provides a forum for researchers, academics and practitioners actively involved in improving and interchanging knowledge and expertise in a wide range of technical and management issues related to flooding and its devastating effects.
