Urban Soils Rattan Lal, B. A. Stewart, 2017-10-18 Globally 30% of

the world population lived in urban areas in 1950 54% in 2016 and 66% projected by 2050 The most urbanized regions include North America Latin America and Europe Urban encroachment depletes soil carbon and the aboveground biomass carbon pools enhancing the flux of carbon from soil and vegetation into the atmosphere Thus urbanization has exacerbated ecological and environmental problems Urban soils are composed of geological material that has been drastically disturbed by anthropogenic activities and compromised their role in the production of food aesthetics of residential areas and pollutant dynamics Properties of urban soils are normally not favorable to plant growth the soils are contaminated by heavy metals and are compacted and sealed Therefore the quality of urban soils must be restored to make use of this valuable resource for delivery of essential ecosystem services e g food water and air quality carbon sequestration temperature moderation biodiversity Part of the Advances in Soil Sciences Series Urban Soils explains properties of urban soils assesses the effects of urbanization on the cycling of carbon nitrogen and water and the impacts of management of urban soils soil restoration urban agriculture and food security evaluates ecosystem services provisioned by urban soils and describes synthetic and artificial soils

Rural Road Engineering in Developing Countries Jasper Cook, Robert Christopher Petts, 2023-08-02 Rural Road Engineering in Developing Countries provides a comprehensive coverage of the planning design construction and maintenance of rural roads in developing countries and emerging nations It covers a wide range of technical and non technical problems that may confront road engineers working in the developing world focusing on rural roads which provide important links from villages and farms to markets and offer the public access to health education and other services essential for sustainable development Most textbooks on road engineering are based on experience in industrialised countries with temperate climates or deal only with specific issues with many aspects of the design and construction of roads in developing regions stemming from inappropriate research undertaken in Europe and the USA These approaches are frequently unsuitable and unsustainable for rural road network environments particularly in low to middle income countries This book takes on board a more recent research and application focus on rural roads integrating it for a broad range of readers to access current information on good practice for sustainable road engineering in developing countries The book particularly suits transportation engineers development professionals and graduate students in civil engineering
