

# TROUBLE SHOOTING WALBRO CARBURETORS

Walbro carburetors by nature are very dependable and reliable. Once a gasoline engine is broken-in one should not need to re-tune or adjust the carb. If one finds begins having to re-tune and use the choke more often than usual, rest assured...they are having a big problem that is easily solved. 75% of the time, most problems can be traced to the internal filter screen(s). These screens are made from super-fine metal mesh and easily become clogged.

The most obvious sign of a clogged screen is the engine running lean on the top-end which requires re-adjustment. As the clog gets worse, both the top end 'H' needle and the low end 'L' needle will require re-adjustment. Eventually, one will have to choke their engine often to get it to fire up.

All Walbro carburetors have internal filter screens, however there are some that have TWO screens ! If one has a carb with two screens, both will require cleaning and/or replacement.

The primary screen is located on the PUMP SIDE of the carburetor. Remove the single screw located in the middle of the pump cover and carefully lift off the cover & rubber gasket, noting the position of the gasket. When re-assembling the carb make sure the pump diaphragm or gasket is situated correctly, then re install the pump cover and screw.
