### 4.3.3 Ship Dimensions

This view is accessed by pressing **Main → Maintenance → Configuration → AIS → Ship Dimensions**

The parameters in the Ship Dimensions view depends on the configuration parameter "Ship Size Mode" in the Misc. Interfaces view. The Ship Size Mode parameter can be set to either Standard or Simplified (default). The Ship Size Mode affects how the user should input ship size and antenna position information and how it is interpreted.

#### Standard Mode

In this mode the user must input:

- A, B, C, D for internal antenna [m]
- A, B, C, D for external antenna [m]

#### Simplified Mode (default)

In this mode there is no way for the user to input mismatching data, all parameters uses the same precision and each measurement is entered only once (in standard mode it is for example possible to enter three different length of ship: *Convoy/ship length*, *internal A+B* and *external A+B*). In simplified mode the transponder will automatically calculate and correctly round the A, B, C and D values reported on the VHF link.
