

AMERICAN AIRLINES ELECTRONIC RESERVATIONS PROCESSING SYSTEM

How push-buttons-to-computers speed air travel reservations...

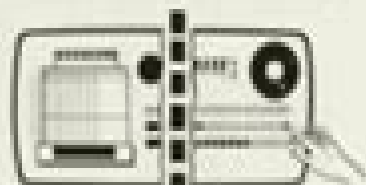

1 Passenger requests a seat on an airline by telephone or in person from any of the 1,000 American Airlines agent offices serving 50 states.

2 Agent finds out which seats are available on all flights for the desired day by pressing buttons that tell the computer what to do.

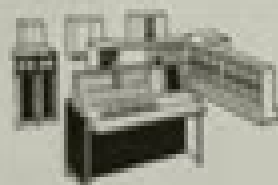

3 ... which is then used by the computer to search for the best route and to make reservations for the passenger.

4 Seat availability is checked and the agent from the Computer Center is notified by a light or sound signal.

5 Passenger enters seat number, flight, and other information on a "push" button.

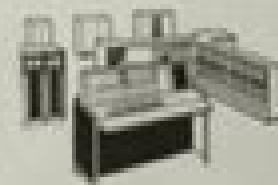

6 ... and the information for the Computer Center is transmitted.

7 Computer center uses its automatic coding unit to assign a code to each flight - flight number, date, number of passengers, departure point and departure and arrival times.

8 Agent is told by the computer additional information to complete the reservation - flight number, date, number of passengers, departure point and arrival times, and any other information such as car rental or travel agency information.

9 Computer automatically checks and confirms the reservation with the computer, and then it is ready to print out the passenger's flight card and ticket, receipt or itinerary.

Central Processing Unit

In addition to handling the passenger's reservation, the new SAB system also:

Answers requests for space from other airlines.

Advises agents to rebook passengers to pick up tickets.

Monitors and processes passengers making bids for discounted flights.

Supplies fare quotations.

Supplies information on arrival and departure times.

Reminds agents to check scheduled passengers of any flight changes.
