

To make the lift easier you could push rather than pick up, reduce the carrying distance, ask someone to help you lift the load, or use a lifting aid.

Plan a route that is well lit and free from any dips or trip hazards. If the route is long, plan and provide opportunities for a rest along the way.

Place your feet apart with one leg slightly forward. Then spread your arms (keeping your back and knees in their normal alignment). Do not stretch, twist or turn.

Hold the load firmly using both hands, ensuring that you have a secure grip so that the load cannot slip. Maintain a good posture while lifting.

At the start of the lift, a slight bending of the back, hips and knees are better than fully flexing the back or fully flexing the hips and knees (squatting).

If the precise positioning of a load is needed, put it down first, then slide it into the desired position rather than twisting while putting the load down.
