SERVICE *Manual*

Abstract. *Chlamydia pneumoniae* (Cpn) is a common human pathogen. It is a member of the Chlamydiae family, which are obligate intracellular bacteria. Cpn is a major cause of pneumonia and is also associated with a variety of other diseases, including atherosclerosis, myocarditis, and certain types of cancer. The purpose of this study was to investigate the prevalence of Cpn in a population of healthy individuals. A total of 100 individuals were recruited from a local community and their blood samples were analyzed for the presence of Cpn using a polymerase chain reaction (PCR) assay. The results showed that 15% of the individuals tested positive for Cpn. This finding suggests that Cpn is a common pathogen in the community and may play a role in the development of certain diseases.
