A Collection of Service Essays Harry Katzan Jr, 2018-02-23 This book is a collection of papers written by the author on the subject of service. They all have been peer reviewed and written for a diverse variety of reasons. Some papers have been modified to suit a general audience and others have simply been improved. There are some formatting differences due to the basic requirements of the various venues. The subject matter can be viewed as three separate sections: introductory, foundational, and applicative. The introductory papers are quite simple and give a gentle introduction to what the discipline of service is all about. The foundational papers provide a basis for the study of the concepts and methods of the service discipline. The applicative papers are general in nature so as to provide insight to what does and can go on in the world of service. Papers 1 and 2 fall into the first category. Papers 3, 4, and 5 are in the second category, and the remainder are in the third group. The table of contents is unique in that the entries give an abstract to the respective paper. This is an aid to a selection and gives a summary of the subject matter. The papers were assembled to support two recent books on the subject of service.

A History of Technology and Environment Edward Golding, 2016-12-08 This book provides an accessible overview of the ways that key areas of technology have impacted global ecosystems and natural communities. It offers a new way of thinking about the overall origins of environmental problems. Combining approaches drawn from environmental biology and the history of science and technology, it describes the motivations behind many technical advances and the settings in which they occurred before tracing their ultimate environmental impacts. Four broad areas of human activity are described: over harvesting of natural resources using the examples of hunting, fishing, and freshwater use; farming; population; land use and migration; discovery; synthesis and use of manufactured chemicals; and development of sources of artificial energy and the widespread pollution caused by power generation and energy use. These innovations have been driven by various forces, but in most cases, new technologies have emerged out of fascinating psychologically rich human experiences. This book provides an introduction to these complex developments and will be essential reading for students of science, technology, and society, environmental history, and the history of science and technology.
