Abstract

Besides social media and networking sites, one of the more popular ways that this demand is met is through the constant updates and releases of new video games. However, in more recent times video games have not only become a form of entertainment but they are also a method through which many earn their living, whether it is their development or through larger esports tournaments where players can earn potentially millions. To put this in perspective in 2017 DOTA 2 prize pool totalled \$24.6 million. When looking at this industry one of the many struggles that the very first developers would have gone through is how to create and efficient movement system without compromising the user experience. This is especially important in top-down games like DOTA 2 or League of Legends because of the nature of their movement systems and how the players will use simple mouse clicks to administer the movement commands for their in-game characters. In this essay, I will be exploring Dijkstra's algorithm and its variant the A* search algorithm, both of which are very popular algorithms that are used to calculate movement within these games, but before we take a look at the algorithms themselves we will have to familiarise ourselves with some key terminology.

The Grid Based Environment

When referring to graphs in pathfinding there are two types of graphs a sparse graph and a more grid-based environment. The sparse graph will involve a series of nodes which are points, and then the edges which will connect their nodes to show traversable or walkable paths. Whereas in a grid-based environment the nodes are interconnected and there may be some nodes which cannot be traversed. Refer to the diagram below: In the diagrams above the green node represents the current position on the object. In the sparse graph, we are limited to the paths we can take by the predetermined edges whereas in the grid-based environment all the squares are their own nodes and it is possible to move vertically, horizontally or diagonally. The grey squares are other entities and so we cannot traverse those nodes. In essence, in the grid-based environment, assuming there are no non-traversable nodes, each node is connected to eight other nodes ie. all its neighbours. For the purposes of this investigation, I will be using the grid-based environment for all because in games characters can usually move in any given direction as long as there are no non-traversable nodes in the vicinity.

Distances

If we were moving from any given node vertically or horizontally this would equate to a particular distance. We will name this particular distance 1 unit. However, the distance to travel from one node to another diagonally is not the same distance. This is because we have to travel a greater distance to get to the node. To work out what this distance actually is we can use a simple piece of maths known as the Pythagorean theorem. This theorem states that given a right angle triangle the length of the hypotenuse (the side opposite the right angle) is equal to the sum of the squared...

Science Teaching in Schools Great Britain: Parliament: House of Lords: Science and Technology Committee,2006-11-05 The Committee's report examines science and mathematics teaching in secondary schools in England focusing on the following issues the take up of science and mathematics at GCSE and A level the provision of careers advice to students problems in the recruitment and retention of teachers the quality of teaching methods and the role of continuing professional development The Committee finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma based system for 14-19 year old students based on the International Baccalaureate This would ensure that students receive a more rounded education and are not made to over specialise before they are able to see the merits of studying science and mathematics Concerns are also raised about the shortage of science teachers particularly specialist physics and chemistry teachers the quality of careers advice in schools and the importance of practical science in schools

Science in the New Age David J. Hess,1993 In *Science in the New Age* David Hess explores ideologies of the paranormal in the United States He offers a map of the labyrinth of views put forward by parapsychologists and skeptical debunkers spirit channelers and crystal healers Hollywood poltergeist scripts and prophets of the New Age Adopting a cultural perspective Hess moves beyond the question of who is right or wrong to the cultural politics of how each group constructs its own boundaries of true and false knowledge Hess begins by looking at each group's unique version of knowledge science and religion and at its story about the other groups Comparing the various discourses texts writers and groups as cultures he shows how skeptics parapsychologists and New Agers may disagree vehemently with each other but end up sharing many rhetorical strategies metaphors models values and cultural categories Furthermore he argues their shared paraculture has a great deal in common with the larger culture of the United States The dialogue on the paranormal Hess concludes has as much to do with gender power and cultural values as it does with spirits extrasensory perception and crystal healing

Books and Butts Joseph H. Doenges, 2013-05-16 Books and Butts is an historical and humorous insight into the Texas high school of the 1980s It is a diary of the 1980 81 School Year in Boerne Texas written from the perspective of the assistant principal As such it focuses on the trials and tribulations of the school disciplinarian whose job responsibilities included management of textbooks and corporal punishment Hence the title Books and Butts **War and Ideas** John

Mueller, 2013-09-13 This book collects the key essays together with updating notes and commentary of Professor John Mueller on war and the role of ideas and opinions Mueller has maintained that war and peace are in essence merely ideas and that war has waned as the notion that peace is a decidedly good idea has gained currency The first part of the book extends this argument noting that as ideas have spread war is losing out not only in the developed world but now in the developing one and that even civil war is in marked decline It also assesses and critiques theories arguing that this phenomenon is caused by the rising acceptance of democracy and or capitalism The second part argues that the Cold War was at base a clash of ideas that were seen to be threatening not of arms balances domestic systems geography or international structure It also maintains that there has been a considerable tendency to exaggerate security threats currently in particular the one presented by international terrorism and to see them in excessively military terms The third section deals with the role public opinion plays in foreign policy and argues that many earlier conclusions about opinion during the Korean and Vietnam Wars including especially ones concerning the importance of casualties in determining popular support for war apply to more recent military ventures in the Persian Gulf Bosnia Iraq and Afghanistan It also assesses the difficulties leaders and idea entrepreneurs often encounter when they try to manage or manipulate public opinion This book will be of much interest to students of international relations security studies foreign policy and international history *Making Sport History* Pascal Delheye, 2014-05-23 The field of sport history is a relatively new research domain situated at the intersection of a number of disciplines and sub disciplines This interdisciplinarity has created interesting avenues for growth and fresh thinking but also inherent problems of coherence and identity Making Sport History examines the development of an academic community around sport history exploring the roots of the discipline its current boundaries borders and challenges and looking ahead at future prospects Written by a team of world leading sport historians with commentaries from scholars working outside of the sport historical mainstream the book considers key themes in the historiography of sport including The relationship between history sport studies and physical education Comparative analysis of the role of historians in the writing of sport history Modern and post modern approaches to sport history Race gender and the sport historical establishment The role of scholarly organisations conferences and journals in discipline building Presenting new perspectives on what constitutes sport history and its core methodologies the book helps explain why historians have become interested in

sport why they've chosen the topics they have and how their work has influenced the wider world of history and been influenced by it Making Sport History is essential reading for any advanced student scholar or researcher with an interest in sport history historiography or the history and philosophy of the social sciences
