Materials	laptop, projector, powerpoint presentation, video clip, pictures, markers, colored papers, worksheets				
Elements of the Plan	Methodology				
I. Preparations	Awareness (5mins.)	• Conduct of daily routine (prayer, checking of attendance) • Setting of house rules • Presentation of the lesson objectives • Answering of the motivational questions below. 1. What does it mean to be alive? 2. What do you think are the basic needs we need to live?			
II. Presentation	Activity (20mins.)	• <b>Task 1- Picture Analysis</b> Each group will be tasked to study and analyze a certain picture and answer the questions on the worksheet provided. Questions: 1. What are the things that you see in the picture? 2. Which of these things are living? Which are nonliving? 3. Observe the things that you identified as living. What do they have in common? 4. Observe the things that you identified as nonliving. What do they have in common? 5. What interactions do you observe happening among the living and nonliving things? Have each group select a representative to report their output to the class.			
	Analysis (10mins.)	• <b>Task 2- Read to Learn</b> Have students read a short text about the components of the ecosystem. Questions: 1. What are the different components of the ecosystem? 2. What makes living things different from nonliving things? 3. How do organisms interact with each other and with their environment? 4. What will happen to organisms if their environment is not able to provide them with their basic needs?			
	Abstraction (35mins.)	• <b>Task 3- Watch Out for It!</b> Have students watch a short video clip about the components of the ecosystem.

*Internationalizing Rural Science Teacher Preparation* Gayle A. Buck, Vesna Dimitrieska, Valarie L. Akerson, 2023-11-23

This edited volume discusses the need to increase quantity and enhance quality of science education focused on preparing rural students to thrive in an interconnected interdependent and complex world. It acknowledges that globally integrated education incorporates local knowledge and culture with global trends. Additionally, it highlights globally competent science teaching is not included in most preparation programs and teachers enter schools unprepared to address students' needs. Rural schools lack opportunities to keep up with reform efforts and may have limited experiences with diversity, particularly at the global level. These chapters describe globalization in authors' respective academic institutions by sharing global competence action research projects for preservice teachers. The studies presented were conducted in elementary and secondary science methods and science content courses. The book's research is unique as the contributors have carried out action research in science teacher preparation programs and participated in peer discussions that helped them fill gaps in global science teaching while advancing the field of teacher preparation programs.

**The Mathematics Lesson-Planning Handbook, Grades K-2** Beth McCord Kobett, Ruth Harbin Miles, Lois A. Williams, 2018-02-09. This book brings together the best of Visible Learning and the teaching of mathematics. The chapters on learning intentions, success criteria, misconceptions, formative evaluation, and knowing thy impact are stunning. Rich in exemplars grounded in research about practice and with the right balance about the surface and deep learning in math, it's a great go-to book for all who teach mathematics. John Hattie, Laureate Professor, Deputy Dean of MGSE, Director of the Melbourne Education Research Institute, Melbourne Graduate School of Education. Your blueprint to planning K-2 math lessons for maximum impact and understanding. Not sure of tomorrow morning's lesson plan? Or maybe you feel it isn't tailored enough for your students' needs? What do you do? For that and more help is here. *The Mathematics Lesson Planning Handbook: Grades K-2: Your Blueprint for Building Cohesive Lessons* guides teachers step by step through the decision-making process of planning K-2 math lessons that are purposeful, rigorous, and coherent. Instructional experts Beth McCord Kobett, Ruth Harbin Miles, and Lois A. Williams streamline and deepen the lesson planning process, showing teachers how to assess students' complex needs, clarify learning intentions, and select tasks that will best lead to student understanding of mathematical concepts and skills. Along the way, teachers create an individualized blueprint for planning K-2 math lessons for maximum student learning. The lesson planning process guides teachers to identify the mathematical content, language, and social learning intentions for a lesson or unit and connect goals to success criteria. Determine the purpose of a math lesson you're planning by distinguishing between conceptual understanding, procedural fluency, and transfer. Select worthwhile tasks and materials that make the best use of representations, manipulatives, and other instructional tools and resources. Choose the format of your lesson using reasoning and number routines, games, whole class discussion, and pairs or small group work. Anticipate student misconceptions and

evaluate understanding using a variety of formative assessment techniques Decide how you ll launch your lesson facilitate questioning encourage productive struggle and close your lesson Included is a lesson planning template and examples from kindergarten first and second grade classrooms Chapter by chapter the decision making strategies empower teachers to plan math lessons strategically to teach with intention and confidence and to build an exceptional foundation in math for all students

Identity Construction and Science Education Research Maria Varelas,2012-12-17 In this edited volume science education scholars engage with the constructs of identity and identity construction of learners teachers and practitioners of science Reports on empirical studies and commentaries serve to extend theoretical understandings related to identity and identity development vis vis science education link them to empirical evidence derived from a range of participants educational settings and analytic foci examine methodological issues in identity studies and project fruitful directions for research in this area Using anthropological sociological and socio cultural perspectives chapter authors depict and discuss the complexity messiness but also potential of identity work in science education and show how critical constructs such as power privilege and dominant views access and participation positionality agency structure dialectic and inequities are integrally intertwined with identity construction and trajectories Chapter authors examine issues of identity with participants ranging from first graders to pre service and in service teachers to physics doctoral students to show ways in which identity work is a vital albeit still underemphasized dimension of learning and participating in science in and out of academic institutions Moreover the research presented in this book mostly concerns students or teachers with racial ethno linguistic class academic status and gender affiliations that

have been long excluded from or underrepresented in scientific practice science fields and science related professions and linked with science achievement gaps This book contributes to the growing scholarship that seeks to problematize various dominant views regarding for example what counts as science and scientific competence who does science and what resources can be fruitful for doing science
