Oracle Exadata and Netezza TwinFin Compared Phil Francisco, 2011-08-31 Netezza focuses on technology designed to query and analyze big data The company's innovative data warehouse appliances are disrupting the market Wishing to exploit data at lower costs of operation and ownership many of our customers have moved their data warehouses from Oracle Oracle has now brought Exadata to market a machine which apparently does everything TwinFin does and also processes online transactions This examination of Exadata and TwinFin as data warehouse platforms is written from an unashamedly Netezza viewpoint however to ensure credibility we have taken advice from Philip Howard Research Director of Bloor Research and Curt Monash President Monash Research To innovate requires us to think and do things differently solving a problem using new approaches Netezza focuses exclusively on customers needs and wants for data warehousing TwinFin delivers excellent performance for our customers warehouse queries TwinFin offers customers simplicity anyone with basic knowledge of SQL and Linux has the skills needed to perform the few administrative tasks required to maintain consistent service levels through dynamically changing workloads TwinFin's performance with simplicity reduces their costs of owning and running their data warehouses More important our customers create new business value by deploying analytic applications which previously they considered beyond their reach Netezza was part of the inspiration for Exadata Teradata was part of the inspiration for Exadata acknowledged Larry Ellison on January 27 2010 We'd like to thank them for forcing our hand and forcing us go into the hardware business While delivered with Larry Ellison's customary pizzazz there is a serious point to his comment only the best catch Oracle's attention Exadata represents a strategic direction for Oracle adapting their OLTP database management system partnering it with a massively parallel storage system from Sun Oracle launched Exadata V2 with the promise of extreme performance for processing both online transactions and analytic queries That Oracle excels at OLTP is a given But data warehousing and analytics make very different demands of their software and

hardware than OLTP Exadata's data warehousing credentials demand scrutiny particularly with respect to simplicity and value This eReport opens by reviewing differences between processing online transactions and processing queries and analyses in a data warehouse It then discusses Exadata and TwinFin from perspectives of their query performance simplicity of operation and value All we ask of readers is that they do as our customers and partners have done put aside notions of how a database management system should work be open to new ways of thinking and be prepared to do less not more to achieve a better result One caveat Netezza has no direct access to an Exadata machine We are fortunate in the detailed feedback we receive from many organizations that have evaluated both technologies and selected TwinFin Given Oracle's size and their focus on Exadata publicly available information on Exadata is surprisingly scarce The use cases quoted by Oracle provide little input to the discussion which in itself is of concern to several industry followers e.g. Information Week The information shared in this paper is made available in the spirit of openness Any inaccuracies result from our mistakes not an intent to mislead

Data Warehousing and Knowledge Discovery Il-Yeol Song, 2008-08-18 This book constitutes the refereed proceedings of the 10th International Conference on Data Warehousing and Knowledge Discovery DaWak 2008 held in Turin Italy in September 2008 The 40 revised full papers presented were carefully reviewed and selected from 143 submissions The papers are organized in topical sections on conceptual design and modeling olap and cube processing distributed data warehouse data privacy in data warehouse data warehouse and data mining clustering mining data streams classification text mining and taxonomy machine learning techniques and data mining applications

Data Mining with Rattle and R Graham Williams, 2011-08-04 Data mining is the art and science of intelligent data analysis By building knowledge from information data mining adds considerable value to the ever increasing stores of electronic data that abound today In performing data mining many decisions need to be made regarding the choice of methodology the choice of data the choice of tools and the choice of algorithms Throughout this book the reader is introduced to the basic concepts and some of the more popular algorithms of data mining With a focus on the hands on end to end process for data mining Williams guides the reader through various capabilities of the easy to use free and open source Rattle Data Mining Software built on the sophisticated R Statistical Software The focus on doing data mining rather than just reading about data mining is refreshing The book covers data understanding data preparation data refinement model building model evaluation and practical deployment The reader will learn to rapidly deliver a data mining project using software easily installed for free from the Internet Coupling Rattle with R delivers a very sophisticated data mining environment with all the power and more of the many commercial offerings
