

Question Number		Question
1(a) QWC (I, II, III)		
Series		Indicative content
		Extreme weather events are usually defined as being severe (hazardous / disastrous) or unexpected (i.e. outside the range of normal variation). Candidates are able to choose from a range of events, e.g. tropical cyclones, temperate storms, tornadoes, flooding, blizzards, heat waves, fires and drought. Characteristics may be linked to the intensity of the event (i.e. its magnitude), or duration and frequency of occurrence. Linked to this may be the vulnerability of people and the risks (economic / social) associated with particular events. Characteristics may also include ideas about scale of impacts, i.e. localised vs regional etc. Distribution will be controlled by particular event - expect reference to hurricanes (and concentrations at ITCZ etc), drought (Tropical), tornado (interior USA etc) and wildfires (e.g. SE Australia, southern Europe). Smaller scale events, e.g. flooding may have very localised distribution factors (relief, topography, land use, management / diversion schemes).
Level	Mark	Descriptor
Level 1	1-4	Basic and generalised with one or two ideas only relating to chosen extreme weather. Likely does characteristics OR distribution, not both. Lacks structure and very limited use of geographical terminology. Considerable errors in language.
Level 2	5-7	Some ideas examined, but likely to be restricted either in range and or depth. Mentions both characteristics and distribution (could be a place). Some structure and some written language errors.
Level 3	8-10	Describes both characteristics and distribution of a particular event (may be unbalanced), providing depth and/or detail. Well structured; written language errors are rare.

Algorithms - ESA 2010 Mark de Berg, Ulrich Meyer, 2010-08-30 This book constitutes the proceedings of the 18th Annual European Symposium on Algorithms held in Liverpool UK in September 2010 NETWORKING 2010 Mark Crovella, Laura Marie Feeney, Dan Rubenstein, S.V. Raghavan, 2010-04-26 This book constitutes the refereed proceedings of the 9th IFIP TC6 Networking Conference Networking 2010 Papers were solicited in three broad topic areas applications and services network technologies and internet design All papers were considered on their merits by a unified Technical Program Committee TPC there was no attempt to enforce a quota among topic areas We believe the resulting program is an excellent representation of the breadth of recent advances in networking research This year the conference received 101 full paper submissions from 23 countries on all continents reflecting a strong diversity in the networking community Similarly the 92 members of the TPC are from 21 countries and include a mix of academic industry and governmental affiliations The TPC members aided by some 50 external reviewers provided a total of 470 reviews and follow up discussions totaling more than 200 messages The final selections were made at a TPC meeting hosted by Columbia University in New York City with both in person and remote participation In total authors of accepted papers have academic and industry affiliations in 15 countries We finally selected 24 papers for presentation during the conference technical sessions A small number of papers were assigned a shepherd from the TPC to assist in paper revision These statistics represent an acceptance rate of just under 24% comparable to that of previous years The TPC also identified several papers that reflect particularly promising early results these papers were selected for presentation as work in progress papers and are identified as such in the proceedings

Climate vulnerability assessment methodology Lotten Wiréhn, 2017-11-27 Food security and climate change mitigation are crucial missions for the agricultural sector and for global work on sustainable development Concurrently agricultural production is directly dependent on climatic conditions making climate change adaptation strategies essential for the agricultural sector There is consequently a need for researchers planners and practitioners to better understand how why and to what extent agriculture is vulnerable to climate change Such analyses involve challenges in relation to the complex social ecological character of the agricultural system and to the multiple conceptualizations and approaches used in analysing vulnerability The aim of this thesis is to identify how vulnerability assessments can be used to represent climate related vulnerability in Nordic agriculture in order to advance the methodological development of indicator based and geographic visualization methods The following research questions are addressed i How can agricultural vulnerability to climate change and variability in the Nordic countries be characterized ii How do selections definitions and emphases of indicators influence how vulnerability is assessed iii How do estimates of vulnerability vary depending on the methods used in assessments iv How can geographic visualization be applied in integrated vulnerability assessments This thesis analyses and applies various vulnerability assessment approaches in the context of Nordic agriculture This thesis demonstrates that

various methods for composing vulnerability indices result in significantly different outcomes despite using the same set of indicators. A conceptual framework for geographic visualization approaches to vulnerability assessments was developed for the purpose of creating transparent and interactive assessments regarding the indicating variables, methods and assumptions applied, i.e. opening up the black box of composite indices. This framework served as the foundation for developing the AgroExplore geographic visualization tool. The tool enables the user to interactively select, categorize and weight indicators as well as to explore the data and the spatial patterns of the indicators and indices. AgroExplore was used in focus group settings with experts in the Swedish agricultural sector. The visualization supported dialogue; results confirm the difficulty of selecting and constructing indicators, including different perceptions of what indicators actually indicate, the assumption of linear relationships between the indicators and vulnerability, and consequently that the direction of the relationship is predefined for each indicator. This thesis further points at the inherent complexity of agricultural challenges and opportunities in the context of climate change as such. It is specifically emphasized that agricultural adaptation policies and measures involve trade offs between various environmental and socio-economic objectives and that their implementation could furthermore entail unintended consequences, i.e. potential maladaptive outcomes. Nevertheless, it proved difficult to validate indicators due to, e.g. matters of scale and data availability. While heavy precipitation and other extreme weather events are perceived as the most relevant drivers of climate vulnerability by the agricultural experts participating in this study, statistical analyses of historical data identified few significant relationships between crop yield losses and heavy precipitation. In conclusion, this thesis contributes to the method development of composite indices and indicator-based vulnerability assessment. A key conclusion is that assessments are method-dependent and that indicator selection is related to aspects such as the system's spatial scale and location as well as to indicator thresholds and defined relationships with vulnerability, recognizing the contextual dependency of agricultural vulnerability. Consequently, given the practicality of indicator-based methods, I stress with this thesis that future vulnerability studies must take into account and be transparent about the principles and limitations of indicator-based assessment methods in order to ensure their usefulness, validity and relevance for guiding adaptation strategies.

För jordbrukssektorn och global hållbar utveckling i stort är matsäkerhet och
mitigering av klimatförändringar viktiga angelägenheter. Samtidigt är jordbruksproduktionen ofta direkt beroende av klimatförhållanden vilket gör klimatanpassningsstrategier mycket centrala för sektorn. Forskare planerar och aktörer behöver förstå hur
varför och i vilken omfattning jordbruket utsätts för klimatförändringar. Sedan analyser inbegriper även de utmaningar som
skapas genom jordbrukets komplexa socio-ekologiska karaktär och de många utgångspunkter och tillvägagångssätt som används
för att bedöma säkerhet. Syftet med denna avhandling är att identifiera hur säkerhetsbedömningar kan representera

Earthquakes and Health Monitoring of Civil Structures Mihail Garevski, 2012-12-11 Health monitoring of civil structures HMS is a new discipline which contributes to successful and on time detection of damages to structures This

book is a collection of chapters on different topics written by leading scientists in the field It is primarily focused on the latest achievements in monitoring the earthquake effect upon the health of civil structures The first chapter of the book deals with the geotechnical and structural aspects of the 2010 2011 Christchurch earthquakes Further chapters are dedicated to the latest HMS techniques of identification of damage to structures caused by earthquakes Real time damage detection as well as sensors and acquisition systems used for that purpose are presented The attention is focused on automated modal analysis dynamic artificial neural networks and wavelet techniques used in HMS Particular emphasis is put on wireless sensors and piezo impedance transducers used for evaluation of seismically induced structural damage The discussion is followed by presentation of case studies of application of health monitoring for buildings and other civil structures including a super tall structure The book ends with a presentation of shaking table tests on physical models for the purpose of monitoring their behaviour under earthquake excitation Audience The book is primarily intended for engineers and scientists working in the field of application of the HMS technique in earthquake engineering Considering that real time health monitoring of structures represents a sophisticated approach applying the latest techniques of monitoring of structures many experts from other industries will also find this book useful *Invertebrate Learning and Memory* Martin Giurfa, Jean-Marc
