South Africa's Post-Apartheid Military Lindy Heineken, 2020-01-01 This timely book examines how the South African National Defence Force has adapted to the country's new security political and social environment since 1994. In South Africa's changed political state, how has civilian control of the military been implemented and what does this mean for defence in a democracy? This book presents an overview of the security environment, how the mission focus of the military has changed and the implications for force procurement, force preparation, force employment and force sustainability. The author addresses other issues such as the effect of integrating former revolutionary soldiers into a professional armed force, the effect of affirmative action on meritocracy, recruitment and retention of military veterans, looking at the difficulties they face in reintegrating back into society and finding gainful employment, gender equality and mainstreaming the rise of military unions and why a confrontational instead of a more corporatist approach to labour relations has emerged. HIV/AIDS and the consequences this holds for the military in terms of its operational effectiveness. In closing, the author highlights key events that have caused the SANDF to become lost in transition and transformation, spelling out some lessons learned. The conclusions she draws are pertinent for the future of defence security and civil-military relations of countries around the world.

Psychosocial Job Dimensions and Distress/Well-Being: Issues and Challenges in Occupational Health Psychology Renato Pisanti,Anthony J. Montgomery,James Campbell Quick,2018-02-01 Over the last three decades a large body of research has showed that psychosocial job dimensions such as time pressure decision authority and social support could have significant implications

for psychological distress and well being Theoretical models such as the job demand control social support model JD-CS model the effort reward imbalance model ERI model the job demands resources model JDR model and the vitamin model suggest that distress and positive dimensions at work well being and motivation can be considered as two sides of the same coin If the job is designed to provide the right mix of psychosocial job dimensions e g optimal time pressure decision authority and social support work can boost job engagement and well being as well as productive behaviors at work When the job is not designed in an optimal way e g too much time pressure and too little decision authority work can trigger stress reactions and burnout Although some insight has been gained on how job dimensions could predict distress and well being and also into the dimensions that might moderate and mediate these associations research still faces several challenges Firstly most of this research has been cross sectional in nature thus making it difficult to conclude on the long term effects of psychosocial job dimensions Another challenge concerns how the contextual dimensions can be incorporated into micro levels models on employee stress and well being Nowadays work is carried out in the context of a wider environment that includes organizational variables So far the role of the organizational variables in the theoretical frameworks for explaining the relationships between psychosocial job dimensions employee distress and well being has often been underplayed The main aim of this research topic is to bring together international research from different theoretical and methodological perspectives in order to advance knowledge and practice in the field of work stress
