**NASHERJ.** ,2004-07      **Social Science Quotations** Robert Merton,2018-04-27 Social Science Quotations has been prepared to meet an evident unmet need in the literature of the social sciences Writings on the lives and theories of individual social scientists abound but there has been no fully documented collection of memorable quotations from the social sciences as a whole The frequent use of quotations in scientific as well as literary writings that are mere summaries or paraphrases typically fail to capture the full force of formulations that have made quotations memorable This book of quotations invites the further reading or rereading of the original texts beyond the quotations themselves Sills and Merton draw extensively upon the writings that constitute the historical core of the social sciences and social thought those works with staying power often described as the classical texts Many quotations have been drawn from these classical texts because the quotations contain memorable ideas memorably expressed Both consequential and memorable these words have been quoted over the generations entering into the collective memory of social scientists everywhere and at times diffusing into popular thought and into the vernacular as well This book is useful to social scientists anthropologists economists historians political scientists psychiatrists psychologists sociologists and statisticians and for all who want to learn or verify memorable formulations and phrases concerning social thought and social theories It is particularly useful for graduate students taking courses that examine the history of their discipline      **Loop Quantum Cosmology** Guillermo A. Vigier,2013-06-29 The Symposium entitled Causality and Locality in Modern Physics and Astronomy Open Questions and Possible Solutions was held at York University Toronto during the last week of August 1997 It was a sequel to a similar symposium entitled The Present Status of the Quantum Theory of Light held at the same venue in August 1995 These symposia came about as a result of discussions between Professor Stanley Jeffers and colleagues on the International Organizing Committee Professor Jeffers was the executive local organizer of the symposia The 1997 symposium attracted over 120 participants representing 26 different countries and academic institutions The broad theme of both symposia was the enigma of modern physics the non local and possibly superluminal interactions implied by quantum mechanics the structure of fundamental particles including the photon the reconciliation of quantum mechanics with the theory of relativity and the nature of gravity and inertia Jean Pierre Vigier was the guest of honour at both symposia He was a lively contributor to the discussions of the presentations The presentations were made as 30 minute lectures or during an evening poster session Some participants did not submit a written account of their presentation at the symposium and not all of the articles submitted for the Proceedings could be included because of the publisher s page limit The titles and authors of the papers that had to be excluded are listed in an appendix      *The Chautauquan* ,1891      **British Medical Journal** ,1893      *Scientific and Technical Aerospace Reports* ,1992-03      *Hazell's Annual Cyclopaedia* ,1916      *Hazell's Annual* ,1916

 Young Suh Kim,M. Noz,2012-12-06 Special relativity and quantum mechanics formulated early in the twentieth century are the two most important scientific languages and are likely to remain so for many years to come In the 1920 s when quantum mechanics was developed the most pressing theoretical problem was how to make it consistent with special relativity In the 1980 s this is still the most pressing problem The only difference is that the situation is more urgent now than before because of the significant quantity of experimental data which need to be explained in terms of both quantum mechanics and special relativity In unifying the concepts and algorithms of quantum mechanics and special relativity it is important to realize that the underlying scientific language for both disciplines is that of group theory The role of group theory in quantum mechanics is well known The same is true for special relativity Therefore the most effective approach to the problem of unifying these two important theories is to develop a group theory which can accommodate both special relativity and quantum mechanics As is well known Eugene P Wigner is one of the pioneers in developing group theoretical approaches to relativistic quantum mechanics His 1939 paper on the inhomogeneous Lorentz group laid the foundation for this important research line It is generally agreed that this paper was somewhat ahead of its time in 1939 and that contemporary physicists must continue to make real efforts to appreciate fully the content of this classic work      *The Journal of the Engineering Institute of Canada*
