Applied Mathematics and Computational Mechanics for Smart Applications Lakhmi C. Jain, Margarita N. Favorskaya, Ilia S. Nikitin, Dmitry L. Reviznikov, 2021-03-14 This book presents best selected research papers presented at the Thirteenth International Conference on Applied Mathematics and Mechanics in the Aerospace Industry AMMAI 2020 held from September 6 to September 13 2020 at the Alushta Health and Educational Center The Republic of Crimea The book is dedicated to solving actual problems of applied mechanics using modern computer technology including smart paradigms Physical and mathematical models numerical methods computational algorithms and software complexes are discussed which allow to carry out high precision mathematical modeling in fluid gas and plasma mechanics in general mechanics deformable solid mechanics in strength destruction and safety of structures etc Technologies and software systems that provide effective solutions to the problems at various multi scale levels are considered Special attention is paid to the training of highly qualified specialists for the aviation and space industry. The book is recommended for specialists in the field of applied mathematics and mechanics mathematical modeling information technologies and developers of modern applied Elementary Cluster Analysis James C. Bezdek, 2022-10-17 The availability of packaged clustering software systems programs means that anyone with data can easily do cluster analysis on it But many users of this technology don t fully appreciate its many hidden dangers In today s world of grab and go algorithms part of my motivation for writing this book is to provide users with a set of cautionary tales about cluster analysis for it is very much an art as well as a science and it is easy to stumble if you don't understand its pitfalls Indeed it is easy to trip over them even if you do The parenthetical word usually in the title is very important because all clustering algorithms can and do fail from time to time Modern cluster analysis has become so technically intricate that it is often hard for the beginner or the non specialist to appreciate and understand its many hidden dangers Here s how Yogi Berra put it and he was right In theory there s no difference between theory and practice In practice there is Yoqi Berra This book is a step backwards to four classical methods for clustering in small static data sets that have all withstood the tests of time The youngest of the four methods is now almost 50 years old Gaussian Mixture Decomposition GMD 1898 SAHN Clustering principally single linkage SL 1909 Hard c means HCM 1956 also widely known as aka k means Fuzzy c means FCM 1973 reduces to HCM in a certain limit The dates are the first known writing to me anyway about these four models I am with apologies to Marvel Comics very comfortable in calling HCM FCM GMD and SL the Fantastic Four Cluster analysis is a vast topic The overall picture in clustering is quite overwhelming so any attempt to swim at the deep end of the pool in even a very specialized subfield requires a lot of training But we all start out at the shallow end or at least that s where we should start and this book is aimed squarely at teaching toddlers not to be afraid of the water There is no section of this book that if explored in real depth cannot be expanded into its own volume So if your needs are for an in depth treatment of all the latest developments in any topic in this volume the best I can do what I will try
