

C182 Study Guide

1. System Administrator:

- Most common role in IT
- Maintains the operating system of a computer system
- Must understand the operating system well enough to configure the software appropriately for the given organization, create accounts, and safeguard the system from outside attack
- Requires installing new hardware and troubleshooting existing hardware, plus installing device driver software whenever new hardware is added
- Will often have to write their own shell scripts, a program designed to be run by a Unix command-line interpreter (used by an administrator to automate a process), to accomplish both simple and complex tasks.
- Common tasks of a system administrator include:
 - Account management
 - Password management
 - File protection management
 - Security
 - Installing and configuring new hardware and software

2. Network Administrator:

- Separate from the system administrator
- In charge of all aspects of the computer network
- Duties include physically laying down cable, making connections, troubleshooting the network (physical and software), and working with the network hardware (routers and switches, for example).
- Has to configure the individual machines to be able to communicate via the network
- Like the system administrator, the network administrator edits configuration files, installs software and patches (related to the network), etc.

3. Website Administrator:

- Also known as a webmaster, but more precisely referred to as a web server administrator
- Responsible for maintaining websites, which differs from the development of websites
 - Must install, configure, maintain, secure, and troubleshoot the web server
- Will have to work with the system administrator on some aspects of installation and configuration
