

Unit 7 Progress Check: FRQ**1. SHOW ALL YOUR WORK. REMEMBER THAT PROGRAM SEGMENTS ARE TO BE WRITTEN IN JAVA.**

Assume that the classes listed in the Java Quick Reference have been imported where appropriate. Unless otherwise noted in the question, assume that parameters in method calls are not `null` and that methods are called only when their preconditions are satisfied. In writing solutions for each question, you may use any of the accessible methods that are listed in classes defined in that question. Writing significant amounts of code that can be replaced by a call to one of these methods will not receive full credit.

This question involves the creation of user names for an online system. A user name is created based on a user's first and last names. A new user name cannot be a duplicate of a user name already assigned. You will write the constructor and one method of the `UserName` class. A partial declaration of the `UserName` class is shown below.

```
public class UserName
{
    // The list of possible user names, based on a user's first and last
    // names and initialized by the constructor.
    private ArrayList<String> possibleNames;

    /** Constructs a UserName object as described in part (a).
     * Precondition: firstName and lastName have length greater than 0
     * and contain only uppercase and lowercase letters.
     */
    public UserName(String firstName, String lastName)
    { /* to be implemented in part (a) */ }

    /** Returns true if arr contains name, and false otherwise. */
    public boolean isUsed(String name, String[] arr)
    { /* implementation not shown */ }

    /** Removes strings from possibleNames that are found in usedNames
     as described in part (b).
     */
    public void setAvailableUserNames(String[] usedNames)
    { /* to be implemented in part (b) */ }
}
```

(a) Write the constructor for the `UserName` class. The constructor initializes and fills `possibleNames` with possible user names based on the `firstName` and `lastName` parameters. The possible user names are obtained by concatenating `lastName` with different substrings of `firstName`. The substrings begin with the first character of `firstName` and the lengths of the substrings take on all values from 1 to the length of `firstName`.

The following example shows the contents of `possibleNames` after a `UserName` object has been instantiated.
