Security on z/VM Paola Bari, Helio Almeida, Gary Detoro, David Druker, Marian Gasparovic, Manfred Gnirss, Jean Francois Jiguet, IBM Redbooks, 2007-12-05. Discussions about server sprawl, rising software costs, going green, or moving data centers to reduce the cost of business are held in many meetings or conference calls in many organizations throughout the world. And many organizations are starting to turn toward System z™ and z VM after such discussions. The virtual machine operating system has over 40 years of experience as a hosting platform for servers from the days of VM SP, VM XA, VM ESA, and especially now with z VM. With the consolidation of servers and conservative estimates that approximately seventy percent of all critical corporate data reside on System z, we find ourselves needing a highly secure environment for the support of this infrastructure. This document was written to assist z VM support and security personnel in providing the enterprise with a safe, secure, and manageable environment. This IBM Redbooks publication provides an overview of security and integrity provided by z VM and the processes for the implementation and configuration of z VM Security Server, z VM LDAP Server, IBM Tivoli Directory Server for z OS and Linux on System z, with

PAM for LDAP authentication Sample scenarios with RACF database sharing between z VM and z OS or through Tivoli Directory Integrator to synchronize LDAP databases are also discussed in this book This book provides information about configuration and usage of Linux on System z with the System z Cryptographic features documenting their hardware and software configuration The Consul zSecure Pro Suite is also part of this document this product helps to control and audit security not only on one system but can be used as a single point of enterprise wide security control This document covers the installation and configuration of this product and detailed information is presented on how z Consul can be used to collect and analyze z VM security data and how it can be helpful in the administration of your audit data

IBM z/OS Mainframe Security and Audit Management Using the IBM Security zSecure Suite Axel Buecker,Michael Cairns,Monique Conway,Mark S. Hahn,Deborah McLemore,Jamie Pease,Lili Xie,IBM Redbooks,2011-08-18 Every organization has a core set of mission critical data that must be protected Security lapses and failures are not simply disruptions they can be catastrophic events and the consequences can be felt across the entire organization As a result security administrators face serious challenges in protecting the company s sensitive data IT staff are challenged to provide detailed audit and controls documentation at a time when they are already facing increasing demands on their time due to events such as mergers reorganizations and other changes Many organizations do not have enough experienced mainframe security administrators to meet these objectives and expanding employee skillsets with low level mainframe security technologies can be time consuming The IBM Security zSecure suite consists of multiple components designed to help you administer your mainframe security server monitor for threats audit usage and configurations and enforce policy compliance Administration provisioning and management components can significantly reduce administration contributing to improved productivity faster response time and reduced training time needed for new administrators This IBM Redbooks publication is

a valuable resource for security officers administrators and architects who wish to better understand their mainframe security solutions *ADY - IEB ,1989*
