Abstract

A persistent criticism of radical embodied cognitive science is that it will be impossible to explain “real cognition” without invoking mental representations. This paper provides an account of explicit, real-time thinking of the kind we engage in when we imagine counter-factual situations, remember the past, and plan for the future. We first present a very general non-representational account of explicit thinking, based on pragmatist philosophy of science. We then present a more detailed instantiation of this general account drawing on nonlinear dynamics and ecological psychology.

This kind of critique has been repeated many, many times in the intervening years. The frequent repetition of Kirsh’s critique (not always with citation) has led many of those who defend radical embodied cognitive science¹ to offer explanations of how one might explain what Clark and
