

Module 4 Honors Radioactive Decay Lab

Instructions: Complete each section of this report and answer all questions in complete sentences for full credit. Use the lab [grading rubric](#) before you begin.

Click here to watch the [lab completion video](#). We show the entire lab simulation (so you can record the data; don't need to be logged into the course) and explain the conclusion/post lab

Procedure

1. Place 200 candies in the shoebox*, lettered sides up. The candies represent atoms of carbon-14.
2. Cover the box and shake it for three seconds. This represents one interval of time.
3. Remove the lid and take out the candies (atoms) that are upside down (not showing letters). These pieces are the carbon-14 atoms that decayed during the time interval.
4. Count and record in a data table the number of decayed atoms and the number of remaining, not decayed, atoms.
5. Repeat steps 2 to 4 until all atoms have decayed or you have reached 30 seconds on the data table.
6. Repeat the entire experiment for a second trial and record all data.

*If easier, you can use this online [coin flipper](#) to collect the data in lieu of obtaining coins. **Be sure to select NO for "show cumulative stats". We do NOT want an accumulation.** (Use this [video](#) explaining how to use the coin flipper)
