Carol B. Benson, Steven R. Goldstein

Radiology S On Ultrasound Colour Doppler:

An Atlas of Ultrasound Colour Flow Imaging Barry B. Goldberg, 1997-01-01 *Duplex and Color Doppler Imaging of the Venous System* Gerhard H. Mostbeck, 2012-12-06 The human venous system has in the past not always attracted the same attention and interest from radiologists as the arterial system Nevertheless some of the pathologic conditions of the venous system are either frequently seen in daily practice such as varicosis of the lower extremity or may relate to more severe and even life threatening conditions for instance deep venous thrombosis or liver venous pathology However enormous progress has been achieved during the past decade in the field of duplex and color Doppler imaging necessitating an update in our knowledge of these techniques For both reasons a volume specifically dealing with duplex and color Doppler imaging of the venous system was considered an appropriate addition to the series Medical Radiology Diagnostic Imaging I would like to thank Prof Mostbeck for his outstanding performance as the editor of this work I would like to congratulate him and the many contributing authors all renowned experts in the field on their comprehensive coverage of the different topics the up to date contents and the superb illustrations I strongly believe that this book will encounter the same success as previous volumes published in this series *Imaging of the Infertile Couple* Carol B. Benson, Steven R. Goldstein, 2001-02-08 In *Imaging of the Infertile Couple* the editors have assembled a team of leading experts to cover a broad range of topics from the old and proven such as hysterosalpingography to the latest and cutting edge such as sonohysterography and sonosalpingography The role of ultrasound in newer areas such as impotence and assisted reproductive technology and its applications when conception finally does take place are also explored *Radiology of the Female Pelvic Organs* Erich K. Lang, 2012-12-06 *Radiology of the Female Pelvic Organs* represents the third text in Erich K Lang's trilogy which includes the previously published titles *Radiology of the Upper Urinary Tract* and *Radiology of the Lower Urinary Tract* This volume provides a comprehensive review of diseases of the female pelvic organs The clinical picture and pathology are well covered but of course the emphasis is on imaging of the female pelvic organs and on the interventional procedures used to treat maladies of these organ systems The current volume departs from the preceding two works in that the major emphasis is on the new modalities of MRI CT and ultrasonography including color Doppler Professor Lang has brought together the foremost experts from around the world in each of the specific areas of radiology of the female pelvic organs Special skills developed in each radiologic community are lucidly described Several chapters describe the relative roles of the different new modalities and give guidance to the clinician in choosing the most appropriate imaging technique The volume not only discusses diagnosis and staging but places a major emphasis on therapy and the evaluation of the effectiveness of various therapeutic modalities The extensive literature citations catalog the experience of the experts worldwide and are not limited to any specific geographic area This volume truly confirms that medicine has become a global effort with experts from throughout the world offering their own unique contributions *Imaging of Soft Tissue Tumors* Filip M. Vanhoenacker, Arthur M. de

Schepper, Paul M. Parizel, Jan L.M.A. Gielen, 2006-04-26 This richly illustrated book provides a comprehensive survey of the growing role of medical imaging studies in the detection staging grading tissue characterization and post treatment follow up of soft tissue tumors For each tumor group imaging findings are correlated with clinical epidemiologic and histologic data The relative merits and indications of various imaging modalities are discussed and compared Particular emphasis is placed on MRI because of its unique contrast resolution and multiplanar imaging capabilities This third revised and updated edition includes new chapters on genetics and molecular biology and on pathology of soft tissue tumors with respect to the new World Health Organization WHO classification of soft tissue tumors It aims to serve both as a systematic descriptive textbook and as a rich pictorial database of soft tissue masses The addition of numerous new illustrations of common and rare soft tissue tumors will further increase the scientific and educational value of this third edition

Breast Imaging Daniel B. Kopans, 2007 Dr Kopans best selling text and reference on breast imaging is now in its thoroughly revised updated Third Edition The author combines a complete superbly illustrated atlas of imaging findings with a comprehensive text that covers all imaging modalities and addresses all aspects of breast imaging including breast anatomy histology physiology pathology breast cancer staging and preoperative localization of occult lesions This edition includes state of the art information on a new modality breast tomosynthesis as well as on digital mammography MRI ultrasound and percutaneous breast biopsy The book contains more than 1 500 images obtained with the latest technology including many new mammograms and scans using other imaging modalities

FEATURES Information on anatomy histology physiology pathology breast cancer staging and preoperative localization of occult lesions Discusses breast disease from a wider viewpoint than just how to perform and interpret mammography

NEW TO THIS EDITION Digital mammography Major revisions in the MRI ultrasound and interventional sections Updated figures included in this edition Updated information on MR US and percutaneous breast biopsy

Radiological Imaging of the Kidney Emilio Quaia, 2011-01-19 This book provides a unique and comprehensive analysis of the normal anatomy and pathology of the kidney and upper urinary tract from the modern diagnostic imaging point of view The first part is dedicated to the normal radiological anatomy of the kidney and normal anatomic variants The second part presents in detail all of the imaging modalities which can be employed to assess the kidney and the upper urinary tract with careful descriptions of patient preparation investigation protocols and principal fields of application of each imaging modality The entire spectrum of kidney pathologies is then presented with the aid of a large set of images many of which are in color The latest innovations in interventional radiology biopsy procedures and parametric and molecular imaging are also described This book should be of great interest to all radiologists oncologists and urologists who are involved in the management of kidney pathologies in their daily clinical practice
