

3.1 Battery and Battery Charger

3.1.1 FuB 3A Transmitter Battery

The age and ambient temperature are decisive for the length of battery application. Older batteries lose capacity over time. Temperatures under zero also have a negative effect on battery charge.

The length of serviceable battery life depends on how the battery is treated. When handled properly the FuB 3A can exceed 500 charging cycles. Do not totally discharge or short-circuit contacts as this can permanently destroy the battery.

We recommend recharging the battery only when it is empty, i.e. when the red LED blinks or an acoustic signal sounds. Always store rechargeable batteries at room temperature (20 °C or 68 °F).

3.1.2 FLG 105 Battery Charger

Recharging batteries

1. Connect battery charger to mains (refer to nameplate on battery charger for operating voltage).
2. Insert the adapter for the FuB 3A battery in the charging compartment of the battery charger.
3. Insert battery with the nameplate facing up into the battery compartment (pos. ②).

Charging indicator (red LED ; pos. ①)

LED lit :	battery charging.
LED OFF or blinking :	battery full, i.e. operable.
LED blinks when inserting battery :	battery totally discharged or defective.

Note :

- A discharged FuB 3A battery recharges in approx. 2 hours. Electronics in the battery charger ensure that charging does not exceed 5 hours.
- The quick charging of NiCd batteries should only take place at temperatures between +10 °C and +40 °C (50 °F and 104 °F).
- Protect battery contacts against short circuits. Never store batteries in a tool box or trouser pockets. A bunch of keys is enough to short the battery. Always use the protective cap included.
- Use the charger at room temperature (20 °C or 68 °F) and protect it from extreme heat (direct sun).

Handbook of Radioactivity Analysis Michael F. L'Annunziata, 2012-09-01 The updated and much expanded 3e of the Handbook of Radioactivity Analysis is an authoritative reference providing the principles practical techniques and procedures for the accurate measurement of radioactivity from the very low levels encountered in the environment to higher levels measured in radioisotope research clinical laboratories biological sciences radionuclide standardization nuclear medicine nuclear power and fuel cycle facilities and in the implementation of nuclear forensic analysis and nuclear safeguards The book describes the basic principles of radiation detection and measurement and the preparation of samples from a wide variety of matrices assists the investigator or technician in the selection and use of appropriate radiation detectors and presents state of the art methods of analysis Fundamentals of radiation properties radionuclide decay the calculations involved and methods of detection provide the basis for a thorough understanding of the analytical procedures The Handbook of Radioactivity Analysis 3e is suitable as a teaching text for university and professional training courses The only comprehensive reference that describes the principles of detection and practical applications of every type of radioactivity detector currently used The new 3e is broader in scope with revised and expanded chapters new authors and seven new chapters on Alpha Spectrometry Radionuclide Standardization Radioactive Aerosol Measurements Environmental Radioactivity Monitoring Marine Radioactivity Analysis Nuclear Forensic Analysis and Analytical Techniques in Nuclear Safeguards Discusses in detail the principles theory and practice applied to all types of radiation detection and measurement making it useful for both teaching and research **LC GC.** ,1995 **Environmental Health Perspectives** ,2003-02

Fini, 2019-08-08 Biochemistry Physical Biochemistry Molecular Biology Clinical Biochemistry Biochemical Technology Applied Biochemistry Cellular Biology Selective Sample Handling and Detection in High-Performance Liquid Chromatography K. Zech, R.W. Freit, 1989-10-30 This is the second of a two volume project which treats the handling separation and detection of complex samples as an integrated interconnected process On the basis of this philosophy the editors have selected those contributions which

demonstrate that optimal sample preparation leads to a simplification of detection or reduced demands on the separation process Throughout the book emphasis is on chemical principles with minimum discussion of the equipment required an approach which reflects the editors view that the limiting factor in the analysis of complex samples is an incomplete knowledge of the underlying chemistry rather than the hardware available This lack of knowledge becomes more evident as the demands for lower detection limits grow as solving complex matrix problems requires a greater understanding of the chemical interaction between the substance to be analysed and the stationary phase Thus apart from one chapter dealing with chemically modified silicas the main theme of the book is developed in three chapters on sample preparation and three on detection The opening chapter outlines concentration and chromatography on chemically modified silicas with complexing properties and gives examples of the use of these phases with organic and inorganic compounds Chapter II the first of the three contributions dealing with sample preparation addresses such questions as whether the prepared sample is representative of the material to be analysed how to avoid contamination which separation procedure should be used to avoid tedious sample preparation Chapter III describes the processing of whole blood for drug analysis The determination of cyclosporine and its metabolites an especially difficult case demonstrates how comprehensive the optimisation of sample preparation must be to successfully perform the analysis Several other examples are also given Chapter IV deals with radio column liquid chromatography and introduces the other theme of the book i e selective detection methods The widespread use of radioisotopes requires a high degree of purification during the manufacture of the compounds as well as highly accurate detection methods in biological and biochemical studies Chapter V continues the theme of selective detection with an overview of post column reaction detection The use of immobilised enzymes in post column reactors or pumpless reactor systems for on line reagent generation after the chromatographic separation step is discussed in detail Various examples of the separation of biological compounds show how the production of electrochemical reagents and photochemical reaction detection have increased the selectivity of the detection leading to more economical analytical systems Selective detection employing luminescence detection techniques is outlined in Chapter VI The use of immobilised fluorophores or the coupling to photochemical reactions leads to highly selective detection systems which can greatly simplify the sample handling The final chapter reviews the use of continuous separation techniques in flow injection analysis thus revealing the need for a strong interdisciplinary dependence between sample handling and separation in this area Written by experienced practitioners this book will be extremely useful to investigators in many areas of application Each chapter includes sufficient references to the literature to serve as a valuable starting point for more detailed investigation The strong emphasis on sample handling makes the book unique in many ways and it will be welcomed by environmental scientists as well as those active in the clinical pharmaceutical and bioanalytical fields

Radiomatic 500 User Manual Book Review: Unveiling the Magic of Language

In an electronic digital era where connections and knowledge reign supreme, the enchanting power of language has become more apparent than ever. Its ability to stir emotions, provoke thought, and instigate transformation is truly remarkable.
