## Student Exploration: Roller Coaster Physics

**Vocabulary:** friction, gravitational potential energy, kinetic energy, momentum

**Prior Knowledge Questions** (Do these BEFORE using the Gizmo.) Sally gets onto the roller coaster car, a bit nervous already. Her heart beats faster as the car slowly goes up the first long, steep hill.

1. What happens at the beginning of every roller coaster ride?

The roller coaster goes up the first (the largest) hill.

2. Does the roller coaster ever get higher than the first hill? No

Explain. No the first hill always has to be the highest or else the roller coaster will not complete the full length.

### Gizmo Warm-up

The *Roller Coaster Physics* Gizmo models a roller coaster with a toy car on a track that leads to an egg. You can change the track or the car. For the first experiment, use the default settings (Hill 1 = 70 cm, Hill 2 = 0 cm, Hill 3 = 0 cm, 35-g car).

1. Press **Play** () to roll the 35-gram toy car down the track. Does the car break the egg? No

2. Click **Reset** () . Set **Hill 1** to 80 cm, and click **Play**. Does the car break the egg? Yes
3. Click **Reset**. Lower **Hill 1** back to 70 cm and select the 50-gram toy car. Click **Play**. Does the 50-gram car break the egg? Yes
4. What factors seem to determine whether the car will break the egg? The main factors that determine whether or not the egg breaks is the height of hill and the weight of the car. This is because the higher the hill, the higher the potential mechanical energy there is, causing a bigger and stronger on the egg.

**Exploration and Meaning Making in the Learning of Science** Bernard Zubrowski, 2009-08-14 Mountaineers Rock Climbers and Science Educators Around the 1920s rock climbing separated from mountaineering to become a separate sport At that time European climbers developed new equipment and techniques enabling them to ascend mountain faces and to climb rocks which were considered unassailable up to that time American climbers went further by expanding and improving on the equipment They even developed a system of quantification where points were given for the degree of difficulty of an ascent This system focused primarily on the pitch of the mountain and it even calculated up to decimals to give a high degree of quantification Rock climbing became a technical system Csikszentmihaly 1976 observed that the sole interest of rock climbers at that time was to climb the rock Rock climbers were known to reach the top and not even glance around at the scenery The focus was on reaching the top of the rock In contrast mountaineers saw the whole mountain as a single unit of perception The ascent to them is a gestalt including the aesthetic historical personal and physical sensations Csikszentmihaly 1976 p 486 This is an example of two contrasting approaches to the same kind of landscape and of two different groups of people Interestingly in the US Europe and Japan a large segment of the early rock climbers were young mathematicians and theoretical physicists while the mountaineers were a more varied lot
