### Setting the Meter

#### Connecting the Meter

To connect the meter to your CB or amateur radio and your antenna, you need a RG-58U coaxial cable (not supplied) with PL-259 connectors on both ends. The cable must reach from the back of the meter to your radio's antenna jack.

1. Turn off your radio, then disconnect the antenna from the radio and plug it into **ANTENNA** on the back of the meter.
2. Plug the coaxial cable into the radio's antenna jack and into **TRANSMITTER** on the back of the meter.

#### Calibrating the Meter/Measuring SWR

1. Turn on your radio (transmitted). Then set **FUNCTION** on the meter to **CAL**.
2. Select a channel frequency on your transmitter and hold down its transmit key. Do not speak into the microphone.

#### Notes:

- An SWR reading will be different for different frequencies (channels). If you transmit on one channel more often than others, select that channel for the reading. If you transmit on several channels, choose a frequency in the middle of the range of channels you use. For example, if you transmit on all 40 CB channels, choose Channel 20.
- If you use a CB that has colored modes (SWR) do not select any of these modes. Set only AM for SWR measurements.
- If you have an amateur radio, select the continuous wave (CW) or tuning mode to check the SWR.

3. When you hold down the transmit key, rotate **CALIBRATION** on the front of the meter until the needle points to **CAL**.
4. Release the transmit key, then set **FUNCTION** to **SWR**.
5. Press the transmit key again, then find the **SWR** by reading the appropriate scale on the meter.

- If your transmitter's power is less than 20 watts, read the lower scale (marked with an L on its right side).
- If your transmitter's power is more than 20 watts, read the upper scale (marked with an H on its right side).

When you use the Power/SWR Meter, your Power/SWR Meter from RadioShack. Measuring SWR shows you how much of your radio's transmit power is reflected from the antenna back into the antenna cable and feed. With this information, you can adjust the length of your antenna or antenna cable to your antenna and radio combination for maximum efficiency.

#### Interpreting SWR Readings

The ideal SWR reading is 1.0, but this reading is usually possible only under laboratory conditions or with a dummy load. Actual antenna installations have higher readings. The information below will help you interpret the readings you get.

| SWR        | Efficiency  | Interpretation                                                                                                                              |
|------------|-------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| 1.0 to 1.5 | Excellent   | The antenna cable and the antenna length match the transmitter output requirements almost perfectly.                                        |
| 1.5 to 2.0 | Very good   | The antenna, the cable, and the transmitter operate very efficiently.                                                                       |
| 2.0 to 3.0 | Acceptable  | The antenna, the cable, and the transmitter operate with some loss. If possible, adjust your antenna or antenna mounting system to improve. |
| Above 3.0  | Inefficient | Adjust your antenna or antenna mounting system to improve efficiency.                                                                       |

When you measure SWR, use this chart to determine the percentage of power that is wasted through reflection of the signal back to the radio.

| SWR            | 1.0 | 1.1   | 1.2  | 1.5  | 2.0   | 2.5   | 3.0   |
|----------------|-----|-------|------|------|-------|-------|-------|
| Ref. Power (%) | 0   | -0.22 | -0.6 | -4.0 | -11.1 | -18.4 | -25.0 |

For example, an SWR reading of 1.5 also means that 11% of your signal power is lost because 89% of the radio's power is more than enough for almost all applications.

#### Improving SWR

There are several ways to improve the SWR of your radio/antenna combination. Try these first:

- Be sure you are using the type of cable recommended for your equipment. If the manufacturer recommends a 50-ohm cable, do not substitute another type that has a different impedance.
- Confirm that you mounted your antenna according to the manufacturer's instructions. The angle and the feed arrangement can affect the SWR reading.
- Adjust the length of your antenna according to the instructions provided by the manufacturer.

#### Measuring Power

You can use your meter to show how much power your radio is transmitting. You can use this information with the SWR reading from "Measuring SWR" to determine the efficiency of your antenna and radio combination, or to make sure that your antenna and radio combination are operating within legal limits.

For more information about measuring power, see the **ARRL Handbook**, available through [www.arrl.org](http://www.arrl.org) or at your local library.

To measure your transmitter's power output:

1. Set **FUNCTION** to **POWER**.
2. Set **RANGE** on the front of the meter to the correct range for your transmitter.
  - If your transmitter's power is 20 watts or less, set **RANGE** to 20W.
  - If your transmitter's power is more than 20 watts but 200 watts or less, set **RANGE** to 200W.
  - If your transmitter's power is more than 200 watts, or you do not know the transmitter's power, set **RANGE** to 2000W.
3. Set **MODE** on the front of the meter to the correct setting for your transmitter.
  - If your transmitter uses SSB or CW, set **MODE** to **PEP** to measure peak envelope power.
  - If your transmitter uses another type of output, set **MODE** to **AVG** to measure average power.

4. If your transmitter does not use SSB, select a channel or frequency on your transmitter and hold down its transmit key. Do not speak into the microphone.

- If your transmitter uses SSB, input a 1000 - 1500 Hz tone signal from the low frequency oscillator you connected to the transmitter. Then, select a channel or frequency on your transmitter and hold down its transmit key. Do not speak into the microphone.
5. Read the power level by noting the needle's position on the correct **POWER** scale.
    - If you set **RANGE** to 20W in Step 2, read the lower scale (marked with an L on its right side).
    - If you set **RANGE** to 200W or 2000W in Step 2, read the upper scale (marked with an H on its right side).

#### Important:

To accurately measure power using SWR, you must connect a low frequency oscillator (not supplied) capable of generating a 1000 - 1500 Hz tone signal to the transmitter. This procedure should be performed by a qualified technician.

#### Notes:

If the power level is extremely low within the range you selected, set **RANGE** to a lower setting and repeat Steps 4 and 5.

#### Care and Maintenance

- Keep the meter dry. If it gets wet, wipe it dry immediately.
- Use and store the meter only in normal temperature environments only.
- Keep the meter away from dust and dirt.
- Wipe the meter with a damp cloth occasionally to keep it looking new.
- Modifying or tampering with your meter's internal components can cause a malfunction and might void the meter's warranty. If your meter is not operating as it should, take it to your local RadioShack store for assistance.
