

PHYSICS LAB WRITE-UP FORMAT

INTRODUCTION

Labs are the basis for our understanding of the key concepts in physics. Here are the guidelines for success in writing a quality lab report.

1. All laboratory reports are to be written in your bound lab notebooks.
2. The names of all members of your lab team and the date the investigation was performed is to be written in the upper left hand corner of the first page of each report.
3. An appropriate and descriptive title for the report should be placed on the first page of the report.
4. Only use the right hand pages for the formal report. The left hand pages may be used for rough calculations or other notes.
5. Each of the following sections of the laboratory report should be prefaced with the section names.
6. Any data tables or graphs that are generated by the printer should be neatly attached to lab-book.

LAB FORMAT

Purpose

This is a statement of the problem to be investigated. It provides the overall direction for laboratory investigation and must be addressed in the conclusion.

Equipment

- A list of all laboratory equipment used in the investigation.
- A detailed and labeled diagram to illustrate the configuration of the apparatus.

Procedure

- Identify and name all experimental variables, both independent and dependent.
- Briefly describe how the independent variables are controlled.
- Someone who was not present during the lab should be able to understand how the experiment was performed and be able to reproduce the results by reading your procedure.

Data

- Data measured directly from the experiment.
- Derived values obtained by way of mathematical manipulations (for example: average values, or unit conversions) or interpretations of any kind should be included in this section of the report as well.
- A sample calculation must appear describing the method of obtaining all derived values.
- The units for physical measurements in a data table should be specified in column heading only.

Data Analysis

- Include all graphs, analysis of graphs, post laboratory calculations and percent errors.
- All graphs should have a title, labeled coordinate axis and units.
- Unusual results or trends should be noted and explained if possible.
- State the meaning of the slope and discuss the significance of the vertical-intercept when appropriate.
- Include mathematical models (equations with meaningful units) that describe the graphs.

Conclusion

- Discuss the results of your experiment including a justification of its successes or failures.
- Discuss any questionable data or surprising results.
- Explain the possible source of any error or questionable results.
- Suggest changes in experimental design which might test your explanations.
