

CONTROLS AND THEIR FUNCTIONS

VOLUME with On/OFF switch — Turn the transceiver on and off and adjust listening level (or PA level when using that function). This control has no effect on the transmitter output.

SQUELCH — Eliminates annoying noise between transmissions. When properly set, it allows signals to come through, but shuts off the receiver's sound when no signal is present.

This control also permits you to cut out incoming CB calls while using PA function. To do so, rotate **SQUELCH** maximum counterclockwise till it clicks to **CB OUT** position.

Channel Selector — Selects one of the 40 CB channels as indicated in the Channel Indicator window.

PA push-button — In the "out" position (button out), your Transceiver operates in the normal manner. To use the Public Address function, press this button in. This disables the transmitter and lets you use the power amplifier circuitry as a 4-5 watts Public Address amplifier — but, you must have an external speaker connected to the PA SP jack on the back.

If you leave **SQUELCH** in the maximum counterclockwise position — but not switched to **CB OUT** position — you can continue to monitor CB signals on the channel you have selected. If you do not want this constant background noise, set **SQUELCH** to **CB OUT** position.

DELTA TUNE — Functions as a "fine tuning" control. If you receive a signal that is not clear because it is "off-frequency", set to "+" or "-" as required to achieve best signal quality. It is also helpful to reduce adjacent channel interference caused by another station on an adjacent channel operating slightly off frequency. Use the position which in best signal and/or least adjacent channel interference.

Channel Indicator — Shows the selected channel in a large, easy-to-read 7-segment LED display.

S/R F Meter — When receiving, indicates the relative strength of the incoming signal in "S" units. When you transmit, it reads the relative RF power output from your transceiver.
