Rising Tides John R. Wennersten, Denise Robbins, 2017-06-12 Deals masterfully with a neglected crisis how climate change is driving migration The work broaches solutions both practical and political Christopher E Goldthwait former US Ambassador With global climate change upon us it is imperative to start thinking about the massive numbers of people who will be displaced by environmental crises The rise in sea levels alone will account for hundreds of millions of refugees around the globe In *Rising Tides* John R Wennersten and Denise Robbins face the difficult questions that will have to be answered How will people be relocated and settled Is it possible to offer environmental refugees temporary or permanent asylum Will these refugees have any collective rights in the new areas they inhabit And lastly who will pay the costs of all the affected countries during the process of resettlement Offering an essential continent by continent look at these dangers *Rising Tides* is a passionately argued well documented wake up call on the dire current and undeniable human fallout from climate change Looking behind the headlines it connects the dots in a way that will inform and should alarm us all Eugene L Meyer

author of *Five for Freedom* This chilling and urgent call to action spares no detail in its mission to present the facts on a looming humanitarian disaster Climate change warning messages too often focus on the environment without going into specifics of how humans will be hurt by global warming *Rising Tides* singlehandedly rectifies this issue Foreword Reviews A must read for policymakers and those in positions of power especially the ones who remain in a state of denial about climate change and refuse to do enough to address the crisis *The Hindu* [Wildland Fire Dynamics](#) Kevin Speer, Scott Goodrick, 2022-06-30 Wildland fires are among the most complicated environmental phenomena to model Fire behavior models are commonly used to predict the direction and rate of spread of wildland fires based on fire history fuel and environmental conditions however more sophisticated computational fluid dynamic models are now being developed This quantitative analysis of fire as a fluid dynamic phenomenon embedded in a highly turbulent flow is beginning to reveal the combined interactions of the vegetative structure combustion driven convective effects and atmospheric boundary layer processes This book provides an overview of the developments in modeling wildland fire dynamics and the key dynamical processes involved Mathematical and dynamical principles are presented and the complex phenomena that arise in wildland fire are discussed Providing a state of the art survey it is a useful reference for scientists researchers and graduate students interested in wildland fire behavior from a broad range of fields [OECD Economic Outlook, Volume 2015 Issue 1](#) OECD, 2015-06-19 The OECD Economic Outlook is the OECD's twice yearly analysis of the major economic trends and prospects for the next two years *Global Environment Outlook - GEO-6: Healthy Planet, Healthy People* UN Environment, 2019-06-06 Published to coincide with the Fourth United Nations Environmental Assembly UN Environment's sixth Global Environment Outlook calls on decision makers to take bold and urgent action to address pressing environmental issues in order to protect the planet and human health By bringing together hundreds of scientists peer reviewers and collaborating institutions and partners the GEO reports build on sound scientific knowledge to provide governments local authorities businesses and individual citizens with the information needed to guide societies to a truly sustainable world by 2050 GEO 6 outlines the current state of the environment illustrates possible future environmental trends and analyses the effectiveness of policies This flagship report shows how governments can put us on the path to a truly sustainable future emphasising that urgent and inclusive action is needed to achieve a healthy planet with healthy people This title is also available as Open Access on Cambridge Core **Climate Extremes** S.-Y. Simon Wang, Jin-Ho Yoon, Christopher C. Funk, Robert R. Gillies, 2017-06-15 Although we are seeing more weather and climate extremes individual extreme events are very diverse and generalization of trends is difficult For example mid latitude and subtropical climate extremes such as heat waves hurricanes and droughts have increased and could have been caused by processes including arctic amplification jet stream meandering and tropical expansion This volume documents various climate extreme events and associated changes that have been analyzed through diagnostics modeling and statistical approaches The identification of patterns and

mechanisms can aid the prediction of future extreme events Volume highlights include Compilation of processes and mechanisms unique to individual weather and climate extreme events Discussion of climate model performance in terms of simulating high impact weather and climate extremes Summary of various existing theories including controversial ones on how climate extremes will continue to become stronger and more frequent Climate Extremes Patterns and Mechanisms is a valuable resource for scientists and graduate students in the fields of geophysics climate physics natural hazards and environmental science Read an interview with the editors to find out more <https://eos.org/editors-vox/how-does-changing-climate-bring-more-extreme-events>
