**Abstract**—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and heart rate reserve (HRR) of sedentary middle-aged men. The subjects were randomly assigned to a control group (CON) and an exercise group (EX). The EX group performed a 12-week training program consisting of three sessions per week of aerobic exercise. The HR and HRR were measured at rest and during submaximal exercise at the beginning and end of the training period. The EX group showed a significant decrease in HR and HRR at rest and during submaximal exercise compared to the CON group. The results suggest that a 12-week training program can improve cardiovascular fitness in sedentary middle-aged men.

When you install your T-Value One Coverstitching, improper installation of all four corners (90° corners) on the One Coverstitching is the most common mistake, which can result in: 1) improper proper ventilation. Failure to maintain proper ventilation may result in a variety of problems with the product.

- When a manufacturer's price for the product is not in general equilibrium, an efficiency improvement (producer's cost falls) is offset by "increasing the price to the public" (raising the price paid to the government) to maintain the distribution product efficiency as the firm's product is sold in equilibrium in the competitive market.
