Bluetooth Security Attacks Keijo Haataja, Konstantin Hyppönen, Sanna Pasanen, Pekka Toivanen, 2013-10-28 Bluetooth technology has enjoyed tremendous success and it's now employed in billions of devices for short range wireless data and real time audio or video transfer. In this book the authors provide an overview of Bluetooth security. They examine network vulnerabilities and provide a literature review comparative analysis of recent security attacks. They analyze and explain related countermeasures including one based on secure simple pairing and they also propose a novel attack that works against all existing Bluetooth versions. They conclude with a discussion on future research directions. The book is appropriate for practitioners and researchers in information security in particular those engaged in the design of networked and mobile devices.

The Frankencamera Eino-Ville Aleksi Talvala, 2011 Digital cameras both in traditional form factors and as parts of cell phones have become ubiquitous over the last decade. But for the most part they remain black boxes to the end user and cannot be reprogrammed or modified. This has become an obstacle to researchers in the new field of computational photography who want to use the growing computing power of digital cameras to create images no traditional camera could produce. This dissertation presents the Frankencamera platform a digital camera system designed for computational photography. The Frankencamera is a fully open fully programmable digital camera which can be easily modified to test out new research ideas. The Frankencamera architecture allows for per frame control of the capture process and accurate synchronization of all the components that make up the camera. Based on this architecture this dissertation details two hardware platforms: the F2 a flexible custom built camera and the Nokia N900 a commercial smartphone. Both platforms can be easily programmed at a high level using the FCam API written to embody the Frankencamera architecture. Finally this dissertation presents several sample applications for the Frankencamera platform. Several of these applications could not have been developed for any existing camera platform and the ease and speed at which they were written show that the Frankencamera platform is a compelling tool for computational photography.

Economics: The User's Guide Ha-Joon Chang, 2015-10-20 From the internationally bestselling author and prizewinning economist a highly original guide to the global economy. In his bestselling *23 Things They Don't Tell You About Capitalism* Cambridge economist Ha-Joon Chang brilliantly debunked many of the predominant myths of neoclassical economics. Now in an entertaining and accessible primer he explains how the global economy actually works in real world terms. Writing with irreverent wit a deep knowledge of history and a disregard for conventional economic pieties Chang offers insights that will never be found in the textbooks. Unlike many economists who present only one view of their discipline Chang introduces a wide range of economic theories from classical to Keynesian revealing how each has its strengths and weaknesses and why there is no one way to explain economic behavior. Instead by ignoring the received wisdom and exposing the myriad forces that shape our financial world Chang gives us the tools we need to understand our increasingly global and interconnected world often driven by economics.
