Shahidehpour, M. Marwali, 2012-12-06 The overall goal of this book is to introduce algorithms for improving the economic posture of a utility company in a restructured power system by promoting cost effective maintenance schedules Today cutting operations and maintenance O M costs and preserving service reliability are among the top priorities for managers of utility companies Preventive maintenance is perhaps the single largest controllable cost of a utility's operation It is perceived that a careful planning and a good coordination among self interested entities in a restructured power system are essential to achieving an optimal trade off between the cost of maintenance and the service reliability Traditional maintenance programs in vertically integrated utilities relied heavily on time directed maintenance and manufacturer recommendations This book offers a logical

alternative to traditional electric utility maintenance practices and a basis for maintenance decisions The book is organized as follows Chapter I reviews various issues related to the power system operation and presents the role of restructuring in maintenance scheduling In Chapter II fundamental topics related to linear and nonlinear systems are reviewed The duality in linear programming is discussed and integer programming is reviewed Benders decomposition Lagrangian relaxation and Dantzig Wolfe decomposition are presented Several examples are given to demonstrate the applications of different methods The formulation of reactive power optimization is discussed which will be used again in Chapter VII

The Maintenance Partnership Relationship Kenneth E. Bannister, 2024-09-02 This book's purpose is to discover and review the many relationships that maintenance will need to foster daily if it is to become best in class Success in any walk of life is dependent on partner relationships A successful marriage is based on a relationship in which both partners collectively embrace their similarities whilst they collaborate to use each other's strengths to overcome weaknesses and bridge their differences Where teams are concerned there will be many partner relationships that will need to be navigated and managed separately to achieve a defined and unified level of success On any single day a maintainer must interact multiple times with internal and external resource partners to perform their job To function professionally a maintenance department must set up and manage multiple partnerships on a continual basis Partnerships are relationships that live or die based on an understanding of the input and output communications and tangible deliverables required from both sides to make quality management decisions and enable each partner to consistently deliver on their performance mandate at minimum cost Building healthy business partner relationships allows both partners to state their respective points of view and teaches us not to make assumptions on each other's behalf Understanding measuring and tracking what we control lets us objectively define how and where the partnership must work together to better manage and resolve issues that are out of our control or those we must simply manage
