A Clinical Guide for the Treatment of Schizophrenia Alan S. Bellack, 2013-06-29 Research on the nature and treatment of schizophrenia has undergone a revival and metamorphosis in the last decade For a long while the field had been moribund weighed down by an unreliable diagnostic system pessimism about the possibility of new discoveries and a dearth of research funds A number of factors have seemingly coalesced to change this situation with the result that the field is now alive with excitement and optimism Four factors seem to have played important roles in the resurgence of interest First prior to the publication of DSM III in 1980 there was no reliable diagnostic system for the disorder Previous definitions were overly general and imprecise Consequently the label schizophrenia applied to a very heterogeneous group of severely disturbed patients It was rarely clear whether two investigators had studied comparable samples making it impossible to determine if their findings were generalizable or if failures to replicate were due to the unreliability of the results or the fact that the investigators had studied different disorders DSM III has not totally resolved this problem but it has allowed scientists to reliably identify a much more homogeneous group As a result it is now possible to integrate the results of different studies making it much more likely that we can make important advances The second important factor was the development of new technologies that promised to help uncover the nature and etiology of the disorder *The Handbook of Adult Clinical Psychology* Alan Carr, Muireann McNulty, 2014-03-05 The Handbook of Adult Clinical Psychology provides a reliable source of guidance on the full range of issues associated with conducting evidence based practice in adult mental health Topics covered include general frameworks for practice classification and epidemiology CBT psychodynamic systemic and biomedical models general assessment procedures mood problems depression bipolar disorder and managing suicide risk anxiety problems generalized anxiety disorder panic disorder obsessive compulsive disorder PTSD and social phobia physical health problems somatoform disorders chronic pain adjustment to cancer eating disorders and substance abuse other
