Bringing together all the emerging social science research technologies in one place, this Handbook offers comprehensive and up-to-date thinking on emerging technologies and addresses their impact on research methods and in turn how new technologies lead to new research questions and areas of inquiry. It is organized into five sections covering internet technologies, emergent data collection methods, audio visual mobile and geospatial technologies, and technology's impact on studying social life in natural settings. All after taking a look at emergent technologies from a broad social research context. Many of the twenty-nine chapters provide a commentary on and summary of specific technologies, while others discuss the ethical and moral implications and collaborations across disciplines and outside the academy. *HWM*, 2007-07. Ubiquitous sensors, devices, networks, and information are paving the way toward a smart world in which computational intelligence is distributed throughout the physical environment to provide reliable and relevant services to people. This ubiquitous intelligence will change the computing landscape because it will enable new breeds of applications and systems to be developed, and the realm of computing possibilities will be significantly extended. By enhancing everyday objects with intelligence, many tasks and processes could be simplified; the physical spaces where people interact, like workplaces and homes, could become more efficient, safer, and more enjoyable. Ubiquitous computing or pervasive computing uses these many smart things or "u" things to create smart environments, services, and applications. A smart thing can be endowed with different levels of intelligence and may be context-aware, active, interactive, reactive, proactive, assistive, adaptive, automated, sentient, perceptual, cognitive, autonomic, and/or thinking. Research on ubiquitous intelligence is an emerging research field covering many disciplines. A series of grand challenges exists to move from the current level of computing services to the smart world of adaptive and intelligent services. Started in 2005, the series of UIC conferences has been held in Taipei, Nagasaki, Three Gorges, China, Hong Kong, Oslo, and Brisbane. The proceedings contain the papers presented at the 7th International Conference on Ubiquitous Intelligence and Computing (UIC 2010) held in Xi'an, China, October 26-29, 2010. The conference was accompanied by six vibrant workshops on a variety of research challenges within the area of ubiquitous intelligence and computing. *Dr. Dobb's Journal*, 2008. *HWM*, 2008-03.
