Bureau of Public Roads, 1961 **Design Charts for Open-channel Flow** United States. Federal Highway Administration, 1979 The design of a highway drainage channel to carry a given discharge is accomplished in two parts The first part of the design involves the computation of a channel section which will carry the design discharge on the available slope This chapter briefly discusses the principles of flow in open channels and the use of the Manning equation for computing the channel capacity The second part of the design is the determination of the degree of protection required to prevent erosion in the drainage channel This can be done by computing the velocity in the channel at the design discharge using the Manning equation and comparing the calculated velocity with that permissible for the type of channel lining used A change in the type of channel lining will require a change in channel size unless both linings have the same roughness

Vladimir Geroimenko, Chaomei Chen, 2013-06-29 Vladimir Geroimenko and Chaomei Chen The Semantic Web is a vision that
has sparked a wide ranging enthusiasm for a new generation of the Web The Semantic Web is happening The central idea of
this vision is to make the Web more understandable to computer programs so that people can make more use of this gigantic
asset The use of metadata data about data can clearly indicate the meaning of data on the Web so as to provide computers
with enough information to handle such data On the future Web many additional layers will be required if we want computer
programs to handle the semantics the meaning of data properly without human intervention Such layers should deal with the
hierarchical relationships between meanings their similarities and differences logical rules for making new inferences from
the existing data and metadata etc Dozens of new technologies have emerged recently to implement these ideas XML
eXtensible Markup Language forms the foundation of the future Web RDF Resource Description Framework Topic Maps and
many other technologies help to erect a multi storey building of the Semantic Web layer by layer by adding new features and
new types of metadata According to Tim Berners Lee the inventor of the current Web and the Semantic Web it may take up
to ten years to complete the building The new Web will be much more complex than the current one and will contain
enormous amounts of metadata as well as data Microservices and Automation Excellence: Full-Stack Development for the
Intelligent Enterprise 2025 AUTHOR:1-VAMSI KRISNA KONDREDDY, AUTHOR:2-DR DEEPENDRA RASTOGI, PREFACE In
