Periodic Table Poem:

The Periodic Table of Poems Peter Davern, 2017-11-22 Back cover The Periodic Table of Poems is a collection of 93 short poems written to celebrate the chemical elements that make up our Universe Each poem explores the properties of a different element and is accompanied by a set of explanatory notes Peter Davern's new book is full of delightful poems about many of the chemical elements that inhabit the periodic table In addition the accompanying text makes meaningful references to the properties of the elements and their compounds and will be of interest to chemistry students as well as their instructors Dr Eric Scerri UCLA and author of *The Periodic Table Its Story and Its Significance* Note from the author Peter Davern I've long been fascinated by the periodic table of the elements but have always had difficulty recalling just some of the properties of even the more well known elements So to help me remember some of their more prominent properties and occasionally some of their more quirky ones I decided to compose a short poem for each of the naturally occurring elements up to and including element 92 uranium followed by one additional poem to cover the transuranium elements The running order for the collection reflects the normal sequence of the elements as they appear on the periodic table starting with hydrogen then helium lithium beryllium and so on I hope you find the poems of some use **Elemental**

States to maintain its competitive edge in today's global economy. Since most Americans learn about science outside of school, we must take advantage of opportunities to present chemistry content on television, the Internet, in museums, and in other informal educational settings. In May 2010, the National Academies Chemical Sciences Roundtable held a workshop to examine how the public obtains scientific information informally and to discuss methods that chemists can use to improve and expand efforts to reach a general nontechnical audience. Workshop participants included chemical practitioners, e.g., graduate students, postdocs, professors, administrators, experts on informal learning, public and private funding organizations, science writers, bloggers, publishers, and university communications officers, and television and Internet content producers. *Chemistry in Primetime and Online* is a factual summary of what occurred in that workshop. *Chemistry in Primetime and Online* examines science content, especially chemistry, in various informal educational settings. It explores means of measuring recognition and retention of the information presented in various media formats and settings. Although the report does not provide any conclusions or recommendations about needs and future directions, it does discuss the need for chemists to connect more with professional writers, artists, or videographers who know how to communicate with and interest general audiences. It also emphasizes the importance of formal education in setting the stage for informal interactions with chemistry and chemists.
