Programming the Perl DBI Tim Bunce,Alligator Descartes,2000-02-04 One of the greatest strengths of the Perl programming language is its ability to manipulate large amounts of data Database programming is therefore a natural fit for Perl not only for business applications but also for CGI based web and intranet applications The primary interface for database programming in Perl is DBI DBI is a database independent package that provides a consistent set of routines regardless of what database product you use Oracle Sybase Ingres Informix you name it The design of DBI is to separate the actual database drivers DBDs from the programmer s API so any DBI program can work with any database or even with multiple databases by different vendors simultaneously Programming the Perl DBI is coauthored by Alligator Descartes one of the most active members of the DBI community and by Tim Bunce the inventor of DBI For the uninitiated the book explains the architecture of DBI and shows you how to write DBI based programs For the experienced DBI dabbler this book

reveals DBI's nuances and the peculiarities of each individual DBD. The book includes: An introduction to DBI and its design; How to construct queries and bind parameters; Working with database driver and statement handles; Debugging techniques; Coverage of each existing DBD. The Computer User's Survival Guide Joan Stigliani, 1995-10-01. You probably suspect on some level that computers might be hazardous to your health. You might vaguely remember a study that you read years ago about miscarriages being more frequent for data entry operators. Or you might have run into a co-worker wearing splints and talking ominously about Workers' Comp insurance. Or you might notice that when you use a computer too long, you get stiff and your eyes get dry. But who wants to worry about such things? Surely the people wearing splints must be malingerers who don't want to work. Surely the people who design keyboards and terminals must be working to change their products if they are unsafe. Surely so long as you're a good worker and keep your mind on your job, nothing bad will happen to you. The bad news is: You can be hurt by working at a computer. The good news is that many of the same factors that pose a risk to you are within your own control. You can take action on your own to promote your own health, whether or not your terminal manufacturer, keyboard designer, medical provider, safety trainer, and boss are working diligently to protect you. The Computer User's Survival Guide looks squarely at all the factors that affect your health on the job, including positioning
